NATURAL SETTING CHAPTER THREE (Pocahontas County)

(Part 1)

(Sec D)

Feb 8 th 1940

GALFORDS CREEK: Galfords Creek, the head waters of Sitlington Creek from Glade Hill Eastward have been locally known as Galfords Creek from the very Thomas Galford earliest settlement of of this region of Pocahontas County, settled on Galfords Creek then called Sitlington Creek, about the year of 1782, was a tax payer at the date. The Pioneer Thomas Galford secured a Land Grant of 154 Acres of land situate on Sitlington Creek, bearing date of 1794, and is now the same land, owned by Wade Galford and Charley Wilfong, on Galfords Creek East of Glade Hill;

There is a tradition that handed down among the Galford decendants that the phoneer Thomas Galford, gave a Bear Trap for his first homestead on Galfords Creek, this could have happened in the way of barter, and no record made of the transaction.

Galfords Creek has two branches, known as Right hand prong, and Left hamprong prong; The left hand prong is known as the Big Spring Branch of Galfords Creek, which gives rise in a very large Gravelly Spring, known as the Big Spring; This Spring is situated at a very high altitude, in the Alleghany Mountains between the Ramshorn mountain, and the Guinn Ridge.

The main Galfords Creek ,or Right hand prong has a total length of 6.1 miles , with a total fall of 1125 feet, with a rate of fall per mile, of 184.4 feet per mile, and has a drainage are basin of 8.65 square miles.

The Left Hand Prong known as the Big Spring branch has a length of 3.2 miles, with a total fall of 1250 feet, with a rate of fall per mile of 390.6 feet, and has a drainage basin area of 2.48 square miles.

The Virgin forest of the Galfords Creek was taken out by the North Fork Lumber Company, and the Raywood Lumber Company, in the year of 1926. The Galfords Creek was heavily timbered with the famous Hemlack trees, which kept the sunshine from the straws, and thereby made it favorable for the Mountain Brook Trout, which infested its waters clear to the head springs.

Some of the first settlers on upper Galfords Greek was Ludy Taylor ., and samuel Posten who had settled on the lands that was later occupied by Richard Hudson The name "Galfords Greek" was so named by the early settlement made by the pioneer Thomas Galford, and the historical incident that happened in his family, which was the primary cause, in naming the branch Galfords Greek."

The Story in brief, as follows:-It is a matter of authentic history. that Thomas Galford was living with his family on what is now Galfords Creek, when the Indians were still making raids throughout the country. His daughter Elicbeth 14 years of age was sent on an errand and was never heard of afterwards ; word was sent to all the settlers far and near , and vain search was made ; while searching along the creek thinking she had fallen in the water and drowned, they found a large Indian trail , the tracks of the girl, some bits of cloth and other signs which gave evidence that Elizabeth had been captured by the Indians. The trail was followed till it became so obscure that, theidea of recapturing the girl was given up for the time. A few month subsequently Thomas Galford with a man by the name of Samuel Gragory , went on through to the Indian villages in Ohio but found no evidence of the missing girl. There is a tradition, or true story, that upon their return, they captured two fine horses from the Indians , add knowing that they would be followed, by the Indians, returned on their own trail, and in embush shot two or three of the Indians , which put a check on the pursuit, and then by travelling all night made their escape back home. The ornaments and bracelets, were taken from the Indians , which was burned when Thomas Galford Junior, lest his house by fire . The captured horses were two fine stallions , the Bay was called " buck Rabbit" and the other " Irish Grey! Buck Rabbit was sold to John Bird , the accessfor of the Bird relation of Highland County . The other was bought by John Harness a trader from Staunton (DEE prices History for this note)

The fart that Elizabeth Galford was captured by the indians, is an authentic bistorical fact, It is one of the tragedies common smong the early settlers of the Greenbrier valley, while this incident occurred more than one hundred and fifty years

and as long as Galfords Creek will ripple on toward the sea, placidly, with its eternal scheme of nature, it will serve as a marker or momment to the perpetuate the memory of copture of Elizabeth Galford by the Indians.

STONY RUN; - Stony Run is the largest branch that flows into the Galford-Creek, it has an entire length of 3.3 miles with a total fall of 1400 feet and has a fall of 442.2 feet per mile, with a drainage area basin of 4.30 square miles.

The Warn Lumber Company built a standard gegyle Reilroad up Stony Run and crossed the Allogheny Mountain at the head of Stony Run and went down on the waters of the Ruckman Draft, and hauled Quite a lot of timber from the South of the Allegheny Mountain to the Lumber Mill at Raywood near Sitlington, The undertaking of hauling timber across the Allegheny and keeping up the Railroad was a very expensive undertaking, and the project was abandoned leaving much of the virgin forest on the South side of the Allegheny mountain.

Wheren the Reilroad crossed the Allogheny Mountain at the head of Stomy Run the elevation is near about 4000 feet.

The water of the Stony Run is clear as creetal and was ice cold before the wirgin forest was taken out; The bottom land of the Stony Run id very racky, and at the mouth of the Run where it flows into Galfords Creek it is completely covered with small creek worn stones, and thereby it has been called DTCREE RUN for many years.

Sitlington Creek West of what is termed as Galfords Creek, and gives rise near the divide of the waters of Rosin Run . The Thorney Branch fall has an entire length of 3.8 miles with fall of 450 feet, with a of 118.4 feet per mile, and has a n area of a drainage basin of 1.78 square miles .

The Thorny Branch valley was origionally covered with the famous WhitePine , timber . The virgin White pine was takeout by the Sliding system
about the year of 1890. The slide was built by hewing one side of the logs
and paning them down a short log forming a V shaped gatter for the logs
to side in , the team of horses was hitched to the rear log which was called
a bumper, about 25 or 30 logs would be rolled in the slide each being
separated a few inches or feet , by the use of a Trail Bar; The slide would be
well watered , by the use of a water barrel which was run over the Slide before
the logs were rolled in. Sliding was done in freezing weather. The Bumper log
in the rear was hauled by a J Grab so that if the trail ran away the team
would be free from entanglement.

The Thorney Branch, received its name from the many there trees that grew on the branch, and the variety that seemed to grew most abundantly was the Dotted Thorn" which can be identified by the large red or yellow fruit which gives it a very attractive appearance in the fall. Some times the tree will grow 35 feet in height, with a diameter of & to 14 inches, The trunk is thick and short, and the crown id very broad and flat-topped.

The Bark is gray with thin scales on old trunks and the branches are covered with straight thornes which are $1\frac{1}{2}$ to $2\frac{1}{2}$ inches long.

The leaves are alternate, simple, tapering at the base, almost blunt pointed at the spex and irregularly servate or sometimes lobed.

The Flowers appear in May and June and are white. The fruit ripens in the fall
The Mood is heavy, hard, and close grained. This tree preferres rich sandy
soils of mountain borders and grows in theickets. It is a common tree of high
alamatican and is of an importance commorcially.

SHOCK RUN; - Shock Run is that branch of Sitlington Creek that flows on the North-East side of the Michael Mountain and connects with Sitlington Creek near the Gap at the North-East end of Michael Mountain .

This Branch was formerly called Buzzards Creek, for about 100 years.
Ruben Buzzard the progenitor of all the Buzzards of Pecahontass County settled
on this Branch and the most of his children settled on this Branch or very near
to it, and the vicinity was locally known as Buzzards Roost"

The State Highway passes through the BuzzardCreek Valley and in the hay harvest time, hay SHOCKS may be seen by the thousand, and some folks passing through nick-named, the Branch, Shock Run in correspondence of the many Hay Shocks that could be seen in the meadows, the name seems to cling to the the Run, which was locally known as Buzzards Creek.

The Shock Hun or Buzzards Creek Has an entire length of 3.9 miles with a total fall of 1380 feet, with a fall of 358.3 feet per mile, and has a drainage area basin of 10.65 square miles.

This Valley is a fine farming section, and has been well edapted to fruit raising, and there is plausible reason for believing that the largest apple tree in Pocahontas County, and it may be even in West Virginia, may be seen near the place where Reuben Buzzard built his frontier home. It measuress three feet and six inches in diameter. the branches were about 40 feet long. Saventy five bushels have been gathered from this tree at one time. (See Prices History of Pocahontas County conserming this large Apple tree.) This Branch should continue under the name of Puzzard Creek in hence of the old Pioneer Reuben Buzzard which bore his take for a century or more.

NATURAL SETTING CHAPTER THREE (Pocahonter Counth)

(Part 1) (Sec D) Dec 13th 1940

The North Fork of Deer Creek , or (North Fork Creek) as the name is applied to the branch , is incorrectly named , the name does not mean any thing whatsoever, The branch of Deer Creek called North Fork Creek is the east branch of Deer Creek and is not the North Fork as has been named .

The North Fork of Deer Creek (or the original Warwicks Creek)
was at first named "Cartmille Creek" in honor of Thomas Cartmill who had secused
a patent or land Grant, from the Commonwealth of of Virginia for 358 acres of
land bearing date of June 13th 1780 while under the regime of Augusta County.

This tract of land is situated between the "Mine Bank" and the Eastern part of the #8Wnof Greenbank including the mouth of Roain Run and is the first survey of land taken up on the North Fork Creek adjoining the Warwick lands

This branch of Deer Creek was called Cartmills Creek for eperiod of twenty five or thirty years from 1780 till about 1810 as shown in giving the local description of the lands situated on the waters of Cartmills Creek.

Thomas Cartmill was a Revolutionary War vetern and was sworn in as a Captain of The Virginia Militia on May 11 th 1780 (It should have continued under the name of Cartmills Creek.) The North Fork Creek is cold and clear as crystal, has been infested with the famous mountain Brook Trout, the stream has an entire length 11.8 miles and an area of drainage of 29.48 sq miles, a total fall of 1570 feet from the source to the conjunction of Deer Creek proper with a rate of fall per mile of 131.9 feet.

The facility for water power mills on the North Fork of Deer Creek
has led to the establishment and erection of several Water power mills on the

Creek, Mr. The mill of the Pioneur Wooddells, in Greenbank; And Dr. J.P. Mocman mill,
and Fatrick Bruffey, and Urish Hevener Sr.mills, on the site of the North Fork
Willing Company, Solomen Conrad mill, N. J. D.

Filling Company, Solomen Conrad mill. R. J. Browns mill at the mouth of Sutton Run Time, decay, and fire have destroyed all the water power mills located on the North Fork Greek.

(Hellebore Run V

The Hellobore Run is a branch of the North Fork Creek , that flows due North a distance of 3.25 miles with a fall of 950 foot with a rate of fall per mile of about 292.3 feet.

The Hellebore Run was named from the numerous Hellebore plants that grew on the run, especially on the head of the run, where the plants grew mostly in the damp and wet parts of the narrow bottom.

The Hellobore Run section was first developed by Jacob Hevener Sr a cattle raiser of Hightown Virginia, who had secured a land grant or patent of 650 acres bearing date of 1838 and later other tracts adjoining, situated on the Allegheny mountain, Relabore Ridge, and Hellebore Run, and employed John Spencer as a tenant to clear the lands and herd his cattle, horses, and sheep, that he ranged on the Allegheny mountains, now called the Hellebore Ridge grazing farm (but now in possession of the U.S. Forest Service) About 1000 Acres of the Hellebore Run section was fenced up by falting down the trees.

The shining plaited leaves of the Hellebore plants put forth so early in the spring, and was so tempting to the young cattle, that they would est the young Hellebore which is very poisonous, and would die from its poisonous effect, and from this fact that John Spenser the pioneer of the Hellebore Run, spent much of his time in the spring of the years cutting out the poisonous Hellebor plants and thereby he gave it the name of Hellebore Run, and the Hellebore Ridge, one of the highest paints in the States of Seat Wirginia, received its name from the Run, whis is situated on the south west side of the Run.

The plant from which the Hellebore Run took its name, is of the Lily family, and called American White Hellebore; Indian Poke; and Itch Weed; .

It is a native of West Virginia, Dingy, Yellowish or white green, growing a process with age.

inch or less across, very numerous, in stiff- branching, spike-like, denseflowered panicles. Perianth of 6 oblong segments; 6 short curved stemens;

styles.

Stem: is stout, leafy 2 to 5 feet tall. Leaves: Plaited, the lower
ones broadly oval, pointed 6 to 12 inches long; parallel ribbed, sheathing
the stem where they clasp it; with the upper leaves gradually narrowing;
the leaves smong the flowers are small.

It preferrs to grow in Smamps, Wet Woodds, and low Meadows, and blooms between the months of May and July. And grows in the South Eastern part of t the United States. The Name of Hellebore Run and Hellebore Ridge for some unknown reason is incorrectly spelled "ELLEBER" which appears in the Geological Survey records of Pocahontas County, and the Topographical Surveys of U.S. F.S. (Should be spelled "HELLEBORE, ")

The Griffin Run , a branch of the Hellebore Run , is a small branch 1.6 miles long , with a fall of 875 feet , with 546.8 feet fall per male and has a dramage area of 2.53 square miles.

This Branch is very rough and narrow and the mountain sides are very steep and rough but is productive. The Griffin Run for many years was called Cherry Run, until about the year of 1892 when an old mountaineer by the name of Riley Griffin, who wished to live far back in the mountains, among the wild animals, and and wild game, and game fish of the mountain streams, and enjoy the fastness, and solitude, of the virgin forest of the Allegheny Mountains, and secured by Deed a tract of land on the branch now called Griffin Run; The land he owned was very steep almost up on edge.

By much persistence he built up a home, reared a large femily,
his
made lote of money, and always carried it in stocking leg or boot leg,
he lived sumptuously; Wild Turkey, Venison, and Bear meat was a common
article of food upon his table,; He was instrumental in having the Board of
Education of the Greenbank District to erect and may'd mantain a
Rural School on the Griffin Run for the benefit of his own femily and for
the benefit of the folks on the head of the North Fork (Which was called
the Griffin School)

When the North Fork Lumber Company, was cutting out all the virgin forest of the North Fork Creek and vicinity Griffin became much displeased and because he could not rown through the virgin forest, and shoot squirrels from the memoth white oak trees, sold out his property, and left the sountry never to return; but the Branch will always carry his name; Hence the name Griffin Hun.

The U.S. Severment now owner all the lands on the Griffin Run and the Hellsbere Run also the head waters of the North Fork Creek.

plock Run is a small branch of the North Fork Creek 3.25 miles in length and and has a total fall in feet of 1085, and a rate of fall per mile of 293.2 and a drainage area of 2.92 Squre miles.

The Block Run has its source near the Top Allegheny Battle Field, and flows an southernly direction to unite with the North Fork Creek

This Branch has been quoted as "Black Run" in the U.S. F.S. Maps.

But it is locally known as "BLOCK RUN" and receive the from the fact that about

the year of 1840 Jacob Yeager and his son John Yeager had erected an Up and Down

water power Saw mill, below the forks of Block Run, they built a dam across the run with

stones which was a complete piece of masonry the wall was about 13 feet high

and 200 feet long; the inside was filled with clay, at about an angle of one to

one and a half,; When the dam was full of water it covered an acre of ground

Then the gate was closed to fill the dam, to run the mill, the run was completely Blocked, The Yeager Mill Dam Blocked the Run, hence the name Block Run.

NATURAL SETTING, CHAPTER THREE: (Pocahontae County

Rossoe W. Brown.

(Part 1)

(Sec D)

THOMAS CREEK . Thomas Creek gives rise near the water shed of Thorny Creek near the site of the Senica C.C.C. Comp and flows , and flows North to connect with the Sitlington Creek 12 miles East of Sitlington,

It has a meandering longth of 6 miles with a total fall of 900 feet, with a rate of fall per mile of 150 feet. and has has an area of drainage badin of 8.97 square miles.

The Thomas Creek water drainage basin, was mostly covered with the fumous white pine trees, which was cut over, and operated about the year of 1885.

is situated

The Senica State Game Forest, to the South and North-West , and the State Game and Fish Commission, has erected their care keepers home, near the head of this branch .

Therer Creek was first settled by the decendants of the pioneer John Mc Laughlin and Filliam Mc Laughlin, about the time of the formation of Pocahontas County, whose taccesate were among the most popular and prominent citizens of Pocahontes County and were netives of Ireland.

For years Greenbank, eight males away, and Huntersville twelve miles away, were the nearest points of the church service of their preference.

Thomas Greek received its name from an old pioneer by the name Thomas, who had settled for a time on the head waters of the creek; of whom little is known, but as long as the branch continues to flow, it will perpetuate his memory.

Some folks are of the opinion that it was named after Thomas Hatten who owned land near the mouth of Sitlington creek.

Moses spring Run. Moses spring Run flows in to the Greenbrier River, opposite the site of the Raywood Lumber Town, 2 miles south of Case.

It has a total length of 2.9 miles, and a fall of 47%. miles, with ahas a total fall of 1375 feet. —
-drainage basin area of 1.86 square miles. It is situated on the west side of
Greenbrier River and gives rise in one of the most copious, and beautiful
Springs in Pocahontas County, - is near the residence of the late Joe McLaughlin
about 2 miles west of Cass,

The Moses Spring Run received its name from on of the very first settlers of Pocahontas County; It is a small branch of pure clear, cold water but carries with its name, and the incident that brought about its name, one of Ithe thrilling incidents, that was common among the pioneers, and Indians of the Greenbrier Valley.

Foses Poore settled on Knappa Creek about the year of 1770, and during the first years of his pioneer life, in the region of Pocahontas County, he spent such of his time hunting and trapping Back Alleghamy, and the upper Greenbrier River, and the vicinity of Clover Lick.

He was a close observer of Indian movements, and would make careful search for Indian signs before resuming operations, as the hunting seasons returned. The usual place for the Indians to cross the Greenbrier River, in the hunting grounds of that region, was at a narrow place in the river, narrow enough for the Indians to walt with a pole. He would take notice accordingly which side of the River the walting-poles would be on, and acted accordingly. Finally the Indians seemed to have found out his strategy, and thereupon vaulted the narrow passage, and cunningly three the poles back on the other side. This threw the hunter off his guard.

It was faturday; he set his traps, looked after deer sign, and arranged his camp.

It was the hunters purpose to pass the Sabbath at his cump in quiet repose, and desertional reading of the hible, he always carried with him for company. He had put a fut turkey to reast about daylight, and was reclining on a bear ckin feating a lesson from the hible preparatoryte a meason of meditation, and prayer,

tefore breakfast, a habit so characteristic of the Scotch- Irish at that period of time. He was interupted by the breaking of a stick, and upon looking intently and steadily in the direction whence the sound seemed to have come, he saw five or six warriors aiming their guns and moving cautiously upon him.

Seeing there was no chance to escape, hermed in as he was, he threw up his hads and made signs for them to come to him. he put the turkey before them and made signs for them to eat. By gestures and guteral grunting, they gave him to understand that they would not touch it, unless he would eat some first. He did so, and thereupon they dewoured it revenously, and it was no time that scarcely a fragment remained even of the bones.

Soon as breakfast was over, they started for their home in Ohio. Having passed but a few miles, they helted at what the pioneer afterwards called the Moses Spring and ever since that time the little branch, has been handed down from generation to generation as the Moses Spring Run.

The prisoner was securely bound with buffalo raw hide thongs, and pinioned to the ground. a detachment went off in the direction of Stony bottom, and were gone two or three hours. Then they Indians returned they were loaded down with ore.

(It appears by the tradition that there was a lead mine somewhelf in this locality)

this Ore was carried to a place where an othe halt was made, and the ore was # smalled and reduced in weight; so that one could carry what had required two to bring in as raw material.

The prisoner (Moses Moore) was taken as far as Chilacothe and the Indiand seared to have been greatly elated over their capture. So much so that as a special compliment of the Indian Squaws , it was decided in solemn council , of inquiry shat to do with the prisoner; and it was decided that he should run the gauntlet.

The Indians seemed to have known of nothing so intensely amusing than running the gauntlet, and of no complimentmore flattering to their favorite squaw friends than have then to form the sauntlet lines, and leave it to them to terment the emptive. Accordingly ten lines of square were trawn up about six or eight feet spart

the captive had preceded Poses Moore, who was stabled , bruised and hacked to

mis made him think it was only death any way. He entered the line and passed scred distance, finally a squaw with a long handled frying pan struck him. He wrenched the pan from her and knocked her down with his first and then striking right and loft with the hamile of the frying pan, he proceeded along the lines, and many of the square ran away. When Moses Moore had scattered them. the warriors crowded around him patted and praised him, "good soldier" good soldier "and decided that he should be allowed to live. By degrees he secured the confidence of his capters. In hunting he was very successful and the Indian who was his keeper would give him amunition, a part of which he would secret. The suply of amunition was time gradually increasing, and the given to be absent was extended two or three dags.

With the increase of rations, of powder and bullets, and extension of time, he wenture to make escape, and got a start so far ahead that the Indians could see no hopeful chance of recepturing him.

Moses Moore was somemed by the fact that Moses Moore was bound and pinioned to the ground by the Indians near the large spring at the head of the branch.

And as long as long as it continues to flow it will perpetuate the memory of Moses Moore, one of Pocahontus Counties brave pioneers.

(The Wenerable William Collins informed the compiler of the Pocahontas County Mistorical sketches, that he was sure, that the camping spot, where Moses Mosre was captured by the wiley Indians, was on the Collins place on the Greenbeier River near the Cassell fording at a place near Tub Mill; this is in the Mosterman Vicinity.)

CHAPTER THREE.

are Cherry , Cranberry, and Williams Rivers.

Roscoe W. Brown.

Roscor 91, Brown. May 3rd, 1941

Sec D)

GAULEY RIVER; - The Gauley River drainage is of minor importance of
to Pocahontus County except that it has its source within the bounds of Pocahontus
County limits, in three branches - NorthFork, South Fork, and Middle Fork, high up in the west side of the Bew and Cauley Mountains. Flowing west across the
acute angle of the southern end of Randolph County these three forks units at
Three Forks of Cauley at the Randolph-Webster County line and there the main Gauley
continues in a general south west direction, draining, with its tributaries, all of
Webster County south of Elk River. It continues well entrenched, across Webster
and Nicholas Counties to unité with New River at Gauley Bridge, Fayette County,

to form the Great Kanawaha. Its principal tributaries within the area touching Poshontas

The Gauley River has an entire length of 104 miles, as it meanders in its a natural course; but has an air line distance of only 59,2 miles, with a total fall of 3,352 feet or at the average rate of 32.23 feet per mile. And according to the Geological Survey for Webster County, has a drainage area of 1350.37 square miles. CHERRY RIVER OF THE GAULEY.

The Cherry River heads in two forks, North and South , in south westers Focahontes County , and flows west across nothern Greenbrier County into Nicholas County , to join Gauley River at Curtain . The Cherry River in Pocahontas County has a drainage area basin of 5.20 square miles .

How the River got the name of "GAULEY" or what it signifies, is a question that is vague, and obscure. Some folks are of the opinion that it was as name by the French explorers, nothing cound be more natural for French explorers to call this beautiful stream Caule after the ancient name of France.

but there is accurrent tradition handed down by the early pioneers of the Seuley Siver section, that there was a Scotch Irish pioneer hunting, and first furing out on the Becky bluff shave the mouth of "endow Siver,

And was so surprised at seeing such a large River, that he used a slang phrase to give vent to his surprised feeling, at hisfirst sight of the River, by saying "GOLLY" what a River. and from which the word Gauley was coined; .

Gauley River was called by the Mismis Indians, Chin-que-ta-na- cepe-we; And by the Delewars, To-ke-bel-lo-ke, or Falling Creek.

AMTHON CREEK: Anthony Creek, the largest tributary of the Greenbrier River has its source in the Greenbrier County near the Pocahontas County line and the greater part of of its drainage in Greenbrier County. It heads in the Allegheny Fountain in the extreme north east corner of Greenbrier County but flows north west into Pocahontas County for a distance of 12 miles when it swings south west to enter Greenbrier County again and continues in this direction to Alvor Here it swings more to the West cutting a deep gorge between Beaver Lick and Greenbrier Mountains to join the Greenbrier River at Anthony.

It has a total length of 28.65 miles with a fall of 1470 feet, at a rate of 51,3 feet per mile. It has a Total drainage area basin of 146, 93 square miles.

Only 3.7 mides of its length is in Pocahontas County with a drainage area 6

MORTH FORK OF ANTHONY CREEK; - The North Fork of Anthony Creek has the greater park of its drainage in Greenbrier County, but heads on Beaver Lick Mountain in Focabentas County. It flows in a south west direction between Beaver Lick and Fiddle Mountains to a point 12 miles from its mouth where it swings due South to terminate the Middle Mountain, and join Anthony Creek at Neola, it has a total * length of 12.45 miles with a drainage area of 22.77 square miles.

The North Fork of Anthony Creek in Posshontae County is 5 miles long .
with a fall of 525 feet with a rate of fall per mile of 165 feet . and has a dranage
area of 1,14 square miles.

Anthony Creek received its name from a friendly Indian by the name of ANTHON

THDIAN DRAFT: - The Indian Draft, is a small branch that fises in the Eilk Yountain South of Gay Knob and flows in a southernly direction to connect with Stony Greek at Campbell Town, a total distance of 5.2 miles and has a fall of 1060 feet, with a rate of fall of 203.8 feet per mile, and has a drainage area of 7.49 square miles.

The Indian Draft: is one of the small branches of Pocahontas County,
that carries with it, more historical incidents, in its vicinity than any other
small branch in the County; And in order to give an idea of the many events
that have actually happened, upon, and around about the Indian Draft, and which
incidents
has lesd to the naming of the "INDIAN Draft, a few of the Aare found in a letter
written by Calvin W. Price, in The Pocahontas Times bearing date of April 10 th 1941
Which is hereby given in full:

I have been asked to write some things I know about the Indian Draft. A draft is a narrow valley between two leading ridges. Indian Draft reaches from Elk Mountain to Steny Creek at Campbell Town. The Indians travelyed it; the trails forked just below Edray. One trace, a section of the War Path from New York to Georgia went by Edray to cross Elk Mountain, and the other to Clover Lick. The first roads followed Indian trails, and our highways still do, more of less. When the Marlin Fottom and Buttonsville Turnpike nearly a century ago, the route was taken up on Drennin Ridge, as accommodation to homes and farms on the ridgerather than up the water grade of the narrow Draft where no one lived below the forks.

I recall hearing back in my childhood some of the older people speaking of small bands of Indians comping at the mouth of the Indian Draft. These Indians were traveling back and forth from Chio to Wasington. The lands around the Edray branch of the Indian Draft were first opened by Thomas Drennan. The tract embraced thousands of acre I know now that the site of the Drennin cabin was by a spring on the land of Squire first opened as a supposed to know exactly where the pioneer home steed, as it marked the beginning corner of one of the immense land grants, the Callagher turney. These Grants was the bane of settlers, casting shadow on land titles used the scurts definitely decided that the best possible title was ten years

uninterupted possession under fence. My recolection of the Gallagher Survey is a the first call from the Drinnen cabin was a straight line to a black sugar in the two first call from the Drinnen cabin was a straight line to a black sugar in the lew place on Glover Creek Mountain, eight or more miles away. I do not now recall the bearing. I can only remember when only a black hearted traitor would point the bearing. I can only remember when only a black hearted traitor would point out a known corner to one of these old land grants. I recall hearing of an excent a known corner to one of these old land grants. I recall hearing of an excent confederate soldier we rking all day Sunday to dig out, splitup and burn of a great red cak, back on Gallagher Flat on Days Mountain because it was a known corner of the Gallagher Survey. The home of Thomas Drennon was broked up by Indians.

His wife was taken captive and murdered on Elk Mountain a few miles from her home. I have heard that this Indian Raid was prior the Revolution, though 1797 was was probably the year. Late the Drannon homestead passed into possession of place Robert Moore, son of the pioneer Moses Moore. It is likely that the first time Robert Moore set foot on the hands some day to be his own was when as a boy he camef from the east, now Rockbridge County, with his father and others in the pursuit of French Surveyors and their Indian Guides. At the forks of Indian Draft the Frenchmen were embushed. An Indian was killed and a Frenchmen was wounded. Some fifty years since human remains were unearthed near the forks of the Draft.

The dispersion of the exploring party might have originated some of the legands of buried treasure on Indian Draft and in several not distant localities -- Cloverlick Warlinton, Stony Greek, and Millpoint. Near the mouth of Indian Draft on the Greenbrier River was the home of Lawrence Drennon, a brother of Thomas Drennon.

In 1784 Indians made a raid on his home. Henry Baker was shot and killed as he was climbing a fence, returning from his morning wash. Richard Hill jumped the fence and escaped unburt. John and James Bridger were killed in the same Indian Raid

Patrick flator was the School teacher in the family at that time. School House sendow is not far from the mouth of Indian Draft .

In 1765 Indiane raided the Bath Alus setlement in what is now Bath County. The Julius started back to the Chie with prisoners, among them a Mre Mayee, her son Joseph, a write girl, none now unknown, a wors Eleanand her infant daughter. The third night the Indiane, I miles down Enappe Greek from Muntersville, on the Fourth day the

pursuing party overtook the Indians just after they had crossed the Greenbrior River at the Island Ford where the tannery is now. When the firing started the Indians at the Island Ford where the tannery is now. When the firing started the Indians killed the Sloan baby by dashing its head against a tree. The shots scared the pack horse on which the 13 year old Joseph was riding, and the boy was thrown off in a patch of nettles. The Indians escaped with three other prisoners going by way of Indian Draft. The boy was found in the Nettle patch, and he grew up to lose a leg in the Battle of Point Pleasant, 1774. The body of the murdered infant was buried near where the present Marlinton and Huntersvilles road crosses Marlin Run near the Court House, The prisoners were ransomed from the Indians at Detroit after a year or two of ceptivity.

In the war between the States, a Union prisoner named Vorville, knocked his guard out with a rock, at the Gay house above the Fair Ground, and escaped. At the mouth of Indian Draft he was overhauled, offered resistence and was shot.

In his diary the late Bishop Asbury, father of the Methodist Church in the United States speaks of Drennon on Indian Draft as one of his regular stopping places on his itineraries from Main to Georgia. The Bishop records he would spend a day at Drinnon prepare for, and a day at Mingo Flats, to recuperate from the twenty mile ride through the then Elk Valley Wilderness.

Indian Draft is haunted by the spirit of John Drennon, a young soldier in the war of 1812, who died of at Noffolk. The late William Gay ,Sr. as a boy was returning from a nill om Knapps Creek by way of Indian Draft. The horse stopped soldenly and the mill boy looked to see what for. There in a fence corner he saw young John Drennon wrapped in a blanket, taking his rest, Before the boy could speak, the horse bolted off at break neck speed. The boy told the family he had seen soldier John on his way home and would soon hear the news of the war. Then John did most appear at home he was looked for but could not be found. The matter was a mister y to the people of that day until David Cochran and John R. Flammone came home from the war, bringing the news of the death of young Dreamon. The time of his death and the time young day new him the apparation beside the road coincided.

There is a tradition of buried treasure on Indian Draft . English speaking prisoners of pirates on the lower Mississippi took some of their captors treasure in escap ng-- a whole pot full of it; presumably two gallons in size . Up the Mississippi, up the Chio, up the Kanawaha, up the Gauley, up the Williams, down Stony Creek to Indian Draft . There they buried it, to mwait the return from the English speaking settlement east of the Endless Mountains . So far as tradition goes the men never returned and so far as I know to the contrary the Gold and the Silver and the precious stones still await a finder. However, some say it is not on Indian Draft at all, but Cloverlick Creek or Stony Creek , or Stamping Creek are the places to look. Only a year or two ago, people from the north west of the state were here with old maps, looking for the buried treasure. In the war between the States, the Eighth and Sixteenth regiments of Tennesselnfantry camped at Edray , on Indian Draft in Augusti361.

**Beasless broke out and a number of men died . Their bones lie there to this day.

Fifty years ago one of the Tennesee soldiers wrote of the Indian Draft country:

" We wish we could , with proper word and in some beautiful language , give a perfect description of the scenery around about Edray; with all its clear , limped springs of pure water, its lofty mountains reaching up into the sky "...//

Feaver Lick Mountain, and flows in a general westward direction to form the GreebrierPecshontas line for some five miles to where it joins the Greenbrier River.

It has a meandering length of 6.1 miless with atotal fall of 1000 feet or at the rate of 163.9 feet per mile. It has a drainage area of 8.34 square miles.

The Spice Mun received its name at a very early period of time, along years before the formation of Pocahontas County, and was made the boundry line beween Greenbrier and Powahohtas, and was named for the Spicewood Bush, or Spice Eush which was found upon the Branch, which is an ornamental shrub of the Laurel family native to most of the Eastern United States. The small yellow flowers are followed by spicy scarlet fruits and the foliage and bark are also aromatic. The bark was formerly used in household medicine. The dried and powesded berries was used for as a substitute for all spice in the Revolutionary War and the leaves were brewed for tea in the Civil War.

The Spice Bush, which is closely related to the Sassaffas, is used horticultura -lly. It is also called the Benjamin Bush. (See Colum- Encyclopedia)

Mountain and flows south for a distance of 32 miles where it is joined by a small tributary in Trump Run and continues east to the Groonbrier River at Locust Station It is a short Run with a considerable volum of water with a slight fall. This run is a continuation of Hills Creek which sinks beneath Droop Mountain on the opcosite side. It was reported that coloring matter was placed in Hills Creek and was found to emerge in the head of Locust Creek Locust Creek has a drainage area of 9.98 square miles, has a total fall of 135 feet.

MILLS CRIEX; Hills Creek heads high up on the Kinnison Mountain of Ewe Mountains and flows west for some three miles where it is joined by a small branch and turnes south to form a series of beautiful falls in " Falls of Mills Creek " It continues couth east, being joined by smaller branches, to a point 12 miles south of Lobelia

there it sinks into the Greenbrier Limestone beneath Droop Mountain, it has a total length of 8.4 miles, with a total fall of 1525 feet, and a rate of fall per mile of 181.5 feet, and has a drainage are basin of 31.60 square miles.

Hills Creek was named in honor of the Pioneer Ricahrd Hill, ancestral blood courses the veins of a great many worthy citizens of Pocahontas County. It is generally believed that he same to this region soon after the armies of the Revolution were disbanded, from North Carolina. As long as Hills Creek flows and continues to pass under the Droop Mountain his name will be perpetuated. He was one of the most distinguished of the early pioneers as a scout and a vigilant defender of the Forts of Pocahontas County in the pioneer days.

ERUFFEYS CREEK;:- Bruffey Creek is a small stream with its source west of Viney Mourtain and flows south where it is joined by Cave Run and sinks beneath the surface one mile south east of Lobelia. It has an entire length of 3.9 miles and has a fall of 1400 feet, and a rate of fall per mile of 358.9 feet, and has a drainage area of 3.80 square miles. Bruffeys Creek was named from the pioneer John Bruffey who settled on the branch before the formation of Posshontas County, and many of his decentants bearing his name are still living in the vicinity of Bruffey Creek.

OLDHA" RUN: - Oldham Run rises west of Burr Valley and flows in a westward direction south of Pond Ridge, and is joined by Perry and Nigh Gap Runs, and enters the Greenbrier River one half wile due east of Locust Station. It has a total length of 5.4 miles, with a total fall of 830 feet, with a rate of fall per mile of 153.7 feet and has drainage area of 8.01 square miles.

Clidhen Run, Received its name from Joseph Oldham who first received a sland grant is the vicinity of the Branch, while under the regime of Bath County hearing date of 1809.

purr Poust- Office and with several unnumed tributaries forms the drainage west of Burr Valley. It then continues to a point one-half mile north of Denmar where it empties in to the Greenbrier River. It has a total length of 8.2 miles with a fall of 1220 feet or at the rate of 148.7 feet per mile. It has a drainage and of 13.38 square miles.

This Branch was some named by the abundance of Larel that grew on its waters.

ROCK RUN- Rock Run is another small branch with a single tributary emptying into Greenbrier River from the East one mile above Kennison.

The Rock Run is within the bounds of the Watoga State Park, is 1.7 miles long with a fall of 780 feet with a rate of fall per mile of 146.7 Feet and has a drainage area of 1.15 square miles.

ISLAND LICK RUN: - Island Lick Run empties into the Greenbrier River from the est midway between Seebert and Kennisan having its source up on the west side of Pyle - Wountain. It has a total length of 4.8 miles with a fall of 750 feet, with a rate of fall per mile of 156.2 feet, with a drainage basin area of 5.12 square miles.

It lies wholly within the bounds of the Watoga State Forest Park. A fine Rock Eased road with an easy grade and graceful curver, was constructed the entire length of the Island Lick Run, and many 25 log cabins with all modern conveniencies are erected on the Island Lick Run. The Administration Building of the Watoga State.

Park, and the recreational artificial lake is situated upon the Island Lick Run.

Distance Park season is open. This Island Lick Run received its name By the early pieneers, from the fact that there is a very large Island in the Greenbrier River near the mouth of the Run, and a deer lick was at the location of the Cabin meat to the river beace the name Island Lick Run.

the east side of the Cramberry Mountain. Its tributaries are Blue lick Run, and Tilda Fork, and other small unnamed branches. It flows in a southeastward direction occasionally sinking beneath the limestone, but rising again near Millpoint where it is used intermittently to turn Overshot wheels to grind feed and flour, and to propel a small turbine generator. It enters Greenbrier River one-half mile north of Seebert. It has a meandering length of 6.8 miles with a total fall of 1710 feet, at a rate of 251.5 feet per mile. It has a drainage area of 15.8 square miles.

The name of Stamping Creek, was first given to the Branch by the first pioneer settlers of that vicinity, which was due to the fact that there was a certain place on the creek that the Deer, Elk, and Buffalo, would meet, and was called the Stamping Ground, which eventually emerged into the name of Stamping Creek.

NATURAL SETTING Pocahontae County.

CHAPTER THREE.

Part (1) Sec D)

Hoecoe W. Brown.

May 17-1941.

STEVENS HOLE RUN; - Stevens Hole Run is a small stream of little importance but has considerable local interest. It has its source in a limestone Spring just west of the State highway 0.27 mile north east of Mill Pointand flows in a southward direction to the Greenbrier River one mile north east of Seebert.

It has a total of 2% miles, with a fall of 305 feet at a rate of 122 feet per mile, with a drainage area of 3.75 Square miles.

Stevens Hole Run is so named after Steven Sewell, whom Colonel Andrew Lewis
found at at Marline Bottom, in 1751 with Jacob Marlin. Steven Sewell spent a
winter soon after in a small cave just at the head of the Run. There is a
tradition that the same Steven Sewell was killed by the Indians some yearslater
an big Sewell Mountain farther down the Greenbrier River. (But the same has
been disputed by other writers) There is a tradition story, that a certain
paymaster of a certain Ohio regiment stole the payroll when here for the Battle of
Broop Mountain, and hid the money in Stevens Hole". (Referred to a sthe Cave in which
steven Sewell lived) In Bowers' book the Tragic Era. In writing up the
carpet bag governor of a certain southern state, the writer says the said governor
had been accused of absconding with the pay roll of a certain Ohio regiment.

A very interesting and well delineated description of this little branch and Gave, locally known as Stevens Hole, and the authentic history that it contains is pertrayed in a special editorial written for the Pocahontas Times bearing date of July 14th 1927, by Andrew Price, President of the Historical Society of West Virginia. The letter is hereby given in full because of the historical data it gives in repart to "Jazab Burlin and (Stephen Sewell, the two first, settlers of the Greenbrier Valley, and other historical data.

Thursday July 14 th 1927.

pord came that the rock work at Stephen Hole Run on the Seneca Trail had destroyed the Cave in which Stephen Sewell lived in the Indian days, so I hot footed it down there to investigate the rumor and was delighted to find the cave was still there. The big limestone cliff a couple hundred feet high faces the State highway about three hundred yards distance, It is of the big Lime or Greenbrier Limestone and many thousand tons have been blasted off the face of the cliff for use in surfacing the road.

The quarry is where the main spring issues and what gaves rise to the report that the cave had been blasted out was that the point that the work had been going on the cliff overhung and formed a kind of shelter from a rain, but in nowice filled the specifications as a den or habitation. It would be like living out of doors. The real cave is high up the cliff some two hundred yards south of the works, and it is safe for many years to come. It is not at all likely that it will effer be needed for road work.

Stephen, s Hole as it is called over looks and is a hole in the wall that encloses the whole of the upper part of the vallby. It is an a similar position to Cluny, s Cage, that Robert Louis Stephenson tells tells us about in " Kidnapped " which was the hiding place of Cluny MacPherson at the time he was outlawed for the part he had taken against Cromwell in favor of the exiled Stewert Kings. It is in the top of a cliff and hid by the trees and timber.

Stephen Hole Run or Sewell Run as it was sometimes called is a little spring branch crossing the highway a mile north of Millpoint. At this point the roed to Huntersville branches off to the east and descends the little valley to Greenbrier hiver where it crosses at the mouth of Bever Creek up which it goes. This was the old time near cut to Huntersville, in the days when it was the county seat, and the river was low enough to ford. Above the road the run has formed a bog of a few acres in extent, and the bold clear stream that issues from it is from surlasting springs and does not very such in volum the year around.

In the old days there was a well founded belief that if horses afflicted with the scratches, an affection of the skin in the fetlock, were watered, and there feet washed in this little streem that they would be cured, and it was the custom to brig horses there from the surrounding Levels community.

In the tourist day that is coming it will be the regular thing to halt the car at this pointmand the vicitors will walk some three hundred yards and climb the declivity that brings them near the top of the cliff and inspect the cave.

It will also afford them the boom of the finest drinking water, as cool and clear as is to be obtained in this world of ours.

I have never seen a cave that was so well suited for a habitation as this one to to no climbing the level of the opening first is found a smooth platform sort of place perhaps thirty by forty feet in size. Next is a great roof or portice which shelters which shelters a large portion of this trace, with an outcurving roof perhaps ten feet high. Then in the wall is a room about six feet wide and ten feet deep, with a low ceiling. A fire across the openingwould keep this little retreat comfortable in the coldest weather. Back in this room is an opening of unknown dimensions but extending well back into the cliff. It is very dark there and would not be suitable place for living rooms but would be an ideal place to store food and supplies. The front room is fitted with a level floor, and being open to the outer air is in good condition now without a particle of fixing to afford a comfortable place to sleep and take shelter. No stream issues from this cave, and there is no current of air. It is an ideal place for camping and is one of the sights of the County.

If you have occasion to visit it, follow the path of up by an old abanded exclust heap. The place is Dr. H. W. Mc Neels farm, the top of the cliff being the dividing line between his farm and that of F. W. Huckman land. Perhaps if you go into the cliff you will be on the Ruckman land as well as the McNeel land.

As is the case of every man who has ever cleared and reclaimed land. I un smothing of a landscape gardener. As you drive through these pleasant valleys, you will premater that it was the man with the axe whose vision splendid and whole So I see great possibilities in that little cove shich has not been much were than a waste place so far. It has been talked of as a place to grow water cress and there has been some slight effort to transplant wild cranberries into the bog part of the shut in place. On the other every side is rich farm land but the cove has been unused except for some indifferent pasture, which in a section so solidly blue grass has not been much esteemed. With very little work there could be a little lake formed here of clear pure water. It would be surrounded by beautiful grassy shores and bestling crags would overlook it, there you would have grass, water, and a precipice in close harmony, and it would be one of the beauty spots of West-Virginia. The highway would skirt one side of the part, and Stephen Sewells everlasting house would look down on it, It would be just the right distance, eight miles, to make an attraction for the town of Marlinton, and it would be an objective for drives from Lewisburg, Ronceverte, White Sulphur Springs, and Het Springs Virginia.

I have been weighing the somewhat slight evidence that has been left of of the pioneer Stephen Sewell. He came here with Jacob Marlin in the seventeen-forties both of them long hunters. I am now informed now by competent authority, - Hon, Boyd B. Stutler, the historian, that long hunter is not a synonym of a tall man tut was a term to distinguish the professional hunter, who crossed into the forbidden lands beyond the mountains for months stay, as compared with those who took a week or so for the purpose of providing their winter meat.

He owes his fame like Marlin and every other notable to the fact that his name got into print and was preserved that way. Owing to this fact he and Marlin have come to be first English settlers of the Mississippi Valley. Their permanent tamp was where the town of Marlinton is located and where they were found by General Andrew Levis. Marlin survived the French and Indian war, and lived to the end of his life here. He married and had a daughter who married a Orinnen, and he has decembants here now.

Marlin and Sewell had the experience of men who are too closely associated. They Quarraled and Sewell left the cabin and took up his abode in a hollow tree. The two places were separated by the crystal waters of Knappe Creek

Both the cabin and tree dwelling were located in the narrow pass through which whapps Greek breaks through to reach the Greenbrier River. This stream flows bet were two peaks or headland maring the gate way to the great Knapps Greek Valley one a spur of the Buckley Mountain and the other a spur of Marlin Mountain. These one a spur of the Buckley Mountain and it is now proposed to name them Mary and peaks have never been given names, and it is now proposed to name them Mary and glizabeth, after Elizabeth Dunlap, and Mary Vance Warwick.

The people of this county have specialized on the name of Marlin, and have allowed the people in a distant part of the State to use the name of Sewell. Thus Sewell is remembered by Big and Little Sewell Mountain, Sewell Creek, Sewell Valley, the town of Sewell, and one of the measures of coal of the New River section, known as the Sewell seam.

Lt is the common belief based upon a tradition, that Stephen Sewell left here, and moved to Sewell Creek which flows into the Gauley River, and that he was there killed by the Indians. As a defender of tradition, I am sorry to say that I have come to the conclusion that Stephen Sewell never lived farther west than the Run, care at the Runthat bears his name in Pocabontas County, near Millpoint.

That he lived on the waters of Gauley is due to a statement prepared by Col. John Steart, the grand old man of Greenbrier County, in the year of 1798, And it is based on his report that Sewell moved forty miles farther west and lived on a creek that bears his name. It is not at all likely that Sewell lived on Gauley of any paint sent of the Greenbrier valley prior to 1756. David Tygart had to leave the nearby walley of Tygarts Valley River in 1754, and he is undoubtedly the original settler west of the long intervening valley of the Greenbrier.

At the same time, it is probable thatSewell ranged widely and Sewell Creek sould have been named for him. But we have definite history of the time and place of his death. It occurred on the 11th day of September 1756, on Jacksons River, tear Fort Dissidite. In 1750, Br. Thomas Walker, and explorer towards Kentucky Greeket the Greenbrier River at the mouth of Anthonys Greek and noted that he had word of white settlements higher up on the river.

The referred to people living at or near the mouth of Knupps Creek.

The next year the Lewises were settling whites on the lands surveyed for the

Underprier Copany. The war clouds began to gather in 1753. France claimed all the

Underprier Copany. The war clouds began to gather in 1753 sent George Washington

land drainedaby the Mississippi. In pursuance of this claim they commenced the

land drainedaby the Mississippi. Go venor Dinwiddie in 1753 sent George Washington

erection of a fort at Pitteburg. Go venor Dinwiddie in 1753 sent George Washington

with an ultimatum to the French to abandon their claim to Fort Duquesne, to which the

French gave no heed. In 1754 Washingtom fought a losing campaign, and reached some

sgreement with the French at a place called the great Meadows or Fort Necessity,

mear Brownsville Pennsylvania. Later in that year the Indians killed the Files

family at Beverly, the first settlers to be massacred by the Indians in the French

and Indian Tar. The next year the settlers on the frontier felt reasonably safe

while Braddock was forming his army but even before his defeat in july, 1755, the

Indians were killing on the Holston River and on the head waters of the New River

The first effect of Braddocks defeat in this section occurred just about a month after that time when the Indians appeared at the mouth of Knapps Creek and killed twelve persons and took eight prisoners. This raid ended the hostilities for the year 1755.

But in February and March 1756 they broke out again. This was caused largely by unfortunate expedition expedition led by Gen Andrew Lewis in the winter of 1755-56 against the Ohio Indians, he marched an army of 418 men clear across the State of West Wirginia to strike the Indians in their towns on the Ohio. It is called the Sandy Grack Wyage. It resulted in disaster and the man suffered from want of food and from the cold weather.

chicken House Run. - Chicken House Run is another minor tributary of the dreenbrier River joining the latter stream one-half mile south of Watoga. It heads on the west slppe of the Pile Mountain and flows almost due west for a distance of 2.8 miles. Its drainage area is 2.42 square miles. It has a total fall of 790 feet, with a rate of fall per mile of 282.1 fee farthile. There is a tradition that the branch was so named from the fact that one of the old pioneer hunters of this section of Pocahontas County knowing that the branch was infested with Foxes and other varmints, and order to catch them, he placed a small Chicken House on a stump with one or two chickens inside the coop, then placed spring traps all around and about the Chicken House, and thereby caught many of the Foxes and Varmits by this method of enticeing them with a chicken; And the branch has been thereafter called Chicken House Run".

BEAVER CREEK:- Beaver Creek is made up of two branches with several small ""

tributaries roughly forming a Y the southern branch heading well up on the west side of Beaver Lick Mountain with the northern branch heading on the east side of the Buckley Mountain to join the Greenbrier River at Violet.

The eld County Road from Hillsboro to Huntersville followed along this stream when Huntersville was the County Seat of Pocahontas County. Beaver Creek has a drainage area of 16.27 square miles. and has a total fall of 8.6 miles with a testal fall of 940 feet, with a rate of fall per mile of 114.6 feet.

Beave Creek was so named from the famous Beavers that once infested its waters.

IMPROVEMENT LICK RUN: THE Improvement Lick Run is a small stream with a length of 3.6 miles, having its source near the top of the Buckley Mountain and flowing westward to join Greenbrier River one mile north east of Violet. So nexed by spicneer who had made some improvement on hid deer blind at the lick, on this particular brawsh, having one located on Sunday Lick, and worday lick Runs. Improvement Lick Run has a total fall of 835 feet, and a rate of fall per mile of 231.9 feet.

MONDAY LICK: and SUNDAY LICK BUN, S

These two small Branches head near the top of Buckley Mountain and flow in a westward direction to join the Greenbrier River about 800 feet apart one mile south of Stillwell. Monday Lick Run has amentire length of 2.5 miles with a total fall of 700 feet, with a rate of fall of 280 feet per mile, with drainage area of 2.02 square miles.

Sunday Lick Run, has an entire length of 2.4 miles, with a fall of 950 feet, with a rate of fall of 395.8 feet per mile, and has a drainage area basin of 1.21 square miles.

In pioneer days Deer Licks were frequented on these branches, and fanciful names were given them by the old pioneer hunters. There is a tradition that once a hunter killed a deer on one of these branches on sunday at one of these licks; and it was thereafter called Sunday Lick Run, Hunting on Sunday was frowned upon by the early settlers and the name was given as an enduring reproof. In order to designate the two Lick Runs the other branch was called Monday Lick Run. Lens Ridge is situate between Wonday Lick, and Sunday Lick, and was so named from an old pioneer hunter by the name of Len Bunday, no doubt the branches were named for him.

STILL HOUSE RUN: - Another run of small importance heading near the north and of Buckley Mountain is locally known as Still House Run, and is the first stream south of Knapps Creek and flows into the Greenbrier River at the Lumber town of Stillwell, Its total length is 3.1 miles with a drainage area of 2.6 square miles. Still House R un was so name from the fact that a Still House was absconded away in a thicket of pines and Laurel on the branch.

SMADO CREEK: - Swago Creek is astroam with a considerable volum of water originating largely from springs that emerge high up in the Swago Mountain and Days Mountain; near Spruce Flate. It is composed of the following branches or tributaries: Mc Blintock Run, Overholt Run, Dry Run, and Buck Run

This network of streams has cut a prominent cove between the range of Redgers Mountain, Swago Mountain, and Spruce Flats. Swago Creek enters Creenbrier River at Buckeye, and has a drainage area of 12,92 square miles and has a total length of 3.3 miles with a total fall of 1295 feet, with a rate of fall per mile of 392.4 feet. McClintocks flour mill was situated on this branch, but is now not in use.

Swago Creek has one of the oldest settlements that was made in Pocahon tas County : The notable family of Ewings settled on Swago about the year 1770 , having sold their land holdings to Moses Moore on Knapps Creek ; william Ewing known as " Swago Bill" was living on Swago Creek in the year of 1786 . he blazed a line of trees around the lands he selected , and afterwards had the tract patented . Once he was plowing when the alarm came that the Indians were preparing to attack the settlement, he hid his plow in the wood and with the other settlers made haste to the nearest fort which was Millpoint then known as Fort Day; a few days afterwards he ventured back to get his plow, and while proceeding through the woods with his plow, he was alarmed by a snaping sound, and turning to one side he saw three Indians behind a log with their guns pointed at him , they had tried to shoot but their powder was deep , and their guns had missed fire ; William Ewing dropped his plow and started to the Fort fast as he could run , with the Indians after him. Going over a raise of the ground into a small hollow , he changed his course , ran up the hellew a short distance and stopped, and then saw the Indians rush by in the regular course. Ewing then made his way to the fort in safety. This was about the time that the Drennan raid occurred, when James Baker and the Bridger boys were killed, which was in the year of 1786.

wage word is compounded from the Indian word Otsegs" "Ot" meaning a place of meeting, and the word Sago" an Indian term of salutation; and the two words coined together emerged into the word SWAGO which menas a meeting place " A happy meeting place " Swago" is one of the beautiful Indian names that is common among the Alleghenies.

It has also been stated that Swago Creek was named after William Ewing locally known as "Swago Bill" Ewing, but records will show that Swago Creek will antedate that of "Swago Bill" He was named Swago Bill because he lived on Swago Creek.

On the head of Swago Creek there is a "Matural Bridge" formed by a stratum of the limestone, about forty feet high in length and fifteen feet high , under which the stream flows. This bridge is in a very rugged country in the forest.

MARLING RUN; - Marlins Run is a small run of minor importance, except the local history that it bears in connection with its name-sake.

Heading near the Marlin Mountain and flowing due west for a distance of 2.7 miles through the town of Marlinton to join Knapps Creek one -half mile above its mouth. It has a total fall of 630 feet with a drainage area of 1.56 square miles

Bootch Irish antecedents to spend a winter in what is now Pocahontas County who were Marlin and Sewell This was the year of 1750-51. Their Camp was in the delta fermed by Marlins Run and the Knappe Creek. In the course of time they agreed to disagree - over the Question of their Religion, they separated and was living apart when they were found by Colonel Andrew Lewis, Marlin was in the Cabin, and Sewell had taken up his abode in a hollow sycamore tree, on the west margin of the slough, Quite near where the walk now crosses, and about in line with a walnut tree new standing on the east bank of the drain and the Gourt books.

colonel Andrew Lewis expressed his surprise at this way of living apart from each other, when so distant from the habitation of other human beings.

Sewell told him they differed in sentiments, and since they separated there was was more tranquility, or a better understanding, for now they were on speaking terms, and upon each morning "itwas gold morning, Mr., Sewell," and "good morning Mr., Marlin". There has been a tradition that these two men quarrelled over their Religion one being a protestant and the other a Catholic, then again, it has been written that they differed over the form of bptism, and that "immersion was the theme of their contention.

It should be understood that these two men at dagger points with each other, while they lived near together on the banks of Marlins Run, they were in speaking distance.

The late William T. Price in kis historical notes writes that he saw the old sycamore tree, and was inside of 1t many times. (from Prices Note as follows) The lower part of the tree bore the striking resemblance to a leaning Indian tepes. The cavity could shelter five or six persons, and the writer has been often in it for shade or for shelter from rain or heat, At the top of the cone , some eight or ten feet from the ground , the tree was not more than twenty inches in diameter , and in that height it was chopped off about the year 1839, to avoid shading the crops. Thus the stump was left for shade or shelter, until it disspeared during the War, being probably used for a comp fire . This new arrangement did not last long , and Sewell in search of less solestation about his religion, with drew about eight miles to scave at the head of Lewells Run near Marvin (now known as Stephen hole Run, See Stephen Hole Run) Then he went forty miles farther on to Sewell Creek, west Greenbrier , and was slain by Indians. (Andrew Price , Historian writes that Stephen Sewell died on the 11th day of September 1756, on Jacksons River, near fort Direction.) or Buth County

It is moreover interesting in this connection to recall the fact that on the banks of Marlins Run, is the burial place of a little child that was dashed to death by an Indian warreer in 1756, when overtaken by a party of Bath or Rockbridge men and the Melitia of Augusta County; seeking to rescue a Mrs. Mays, her son Joseph, an unmarried woman, a Mr. McClenachan, and some othe captives. This burial place is a few yards Rods diagonally from the east angle of Uriah Birds barm on the margin of the Marlins Run.

The infant corps was buried at the foot of the tree where it had been found a few minutesafter its death. The burial fook place just a few hours is later, before the pursurers set out on their return. The grave was dug with hunting knives, hatchets, and naked fingers. The little body was laid in the grave very tenderly, and the grave partly filled with earth. The covering of the grave was completed with rather heavy stones, to prevent foxes or other animals from getting at the remains.

Thus died and was buried the first white child known to history west of the Allegheny Mountains, on the banks of Marlin, s Run in the Town of Marlinton. As long as Marlin, s Run continues to flow it will perpetuate the name of Jacob Marlin.

The first survey that was made in what is now Pocuhontas County was made wife by Colonel Andrew Lewis in 1750 on the Greenberier , Knapps Creek, and Marline Run. When he found Stephen Sewell, and Jacob Marlin so situate on Marline Run which embraces the Town of Marlinton, the County Seat of Pocuhentas County..

MATURAL SETTING Pocahontas County.

Chapter Three.

Part (1) Sec D)

Roscoe W. Brown.
May 315t 1941.

PRICE RUN:- Price Run has its source in a large Limestone Spring emanating from the east side of Stony Cseek Mountain and West of Jericho Flats and Marlinton. No figures are available as to the volum of this spring but as pointed out by Dr. James price of Marlinton it would be sufficient to form a beautiful artificial lake if piped to a natural depression on Jerico flat. This Run has a meandering length of 1.1 miles with a total fall of 285 feet or at the rate of 259 feet per mile. It has a surface drainage area of 1.01 Square miles.

It enters Greenbrier River on the west side of Marlinton. It was so named from the Price family whose home is on the branch also the origional 1800 Andrew Lewis survey of 480 Acres made in 175D, acquire d by Jaob Warwick and settled by his daughter Nancy and her husband Major William T, Poage about 1790. The survey of 440 acres embraces the whole site of the present County seat Marlinton, William Thomas Price, author of Prices Historical Sketches of Pocahontas County, was born here July 19th 1830 and died at the place where he was born. January 15th 1925 aged ninety years.

Near the Price Run was the home of the late Andrew G Price, the President of the West Virginia Historical Society, and was locally known as the Sage of Pocahontas County; Born Jan 28th 1871, Died Mar 26th 1930.

On the banks of the Price Run was the home of Anna L. Price the great religious Postess, who died January 19th 1924. past 87 years of age.

STONY CREEK:- Stony Creek empties into the Greenbrier River 1.1 miles north
of the River Bridge at Marlinton. It has its source 0.8 mile due west of Woodriw
and is joined by several tributaries of less importance in Sharps Run,
Pigeon Run, Dry Run Creek, Indian Draft, and other small unnemed, a large part
of the water coming from several large limestone springs (Mc Laughlin) along
Bry Creek east of Onoto. Stony Creek has a total length of 6.6 miles with a
fall of 1300 feet or at a rate of 196.9 feet per mile. With its tributaries it
has a drainage area of 22.33 feet squame miles. A part of the water of Stony of
Creek is used to propel a turbine for the Geiger Mill.

It was so name at a very early date by the pioneer settlers because of the Creek being so terribly, Rocky and was there by called Stony Creek some of the historical incidents are recorded with its branch Indian Draft..

HALF WAY RUN; - HALF Way Run is a small stream of mimor importance heading in near the top of Marlins Mountain and flowing practically a traight gorge northwest to the Greenbrier River at Knapp. It has a total length of 2.2 miles with a drainage area of 1.35 squage miles. It was so named because it was half way between two particular points, on the Greenbrier River.

skush LICK RUN:- Brush Lick Run heads 0.08 mile south east of Warwick. It is joined by Sideling Run, a stream of greater length, 0.6 mile east of August where the parent stream empties into Greenbrier River. It has a drainage area of 4.73 stoors wiles. The Brush Lick Run was so named from a Deer Lick that was designated as the Brush Lick which was upon the Run.

LESIS LICK RUN :- The Lewis Lick Run has its source in three forks high up on the south side of the Gay Knob and flows south for a distance of 4.6 miles where f it joins the Greenbrier River at Mugust. It has a total fall of 1105 feet of at the rate of 240.2 feet per sile and a drainage basin of 3.63 square miles.

This Franch was so named from the pioneer Lewise, s that first settled in Fernanta County.

THORNY CREEK; - Thorny Greek, with many small tributaries , heads high up on the southern end of Michael Mountain . It is joined from the West by Little Thorn Creek, and flows south west to a point 0.08 mile south-west of Dilleys Mill where it flows west for a distance of 14 miles , cutting a deep gorge between Thorny Creek and Marlins Mountains, thence in a well entrenched meander in a South- west direction to the Greenbrier River one-half north-east of August. Thorny Creek has at/ total length of 9.6 miles with a drainage basin area of 19.34 square miles. It has a total fall of 1250 feet with a rate of fall of 130.2 feet per mile. The Little Thorny Creek has a total length of 3.4 miles with a rate of fall per male of 94.1 feet per mile, and has a drainagearea badin Thorny Creek has the honor of having the the first of 2.72 square miles. largest survey made in what is now Pocahontas County, (was then under the regime Bath County) which was made for Thomas Wilson in the year of 1795 and embraced 44,000 scree of land and included practically all the waters of Thorny Creek The Senica State Forest id situated on the Thorny Foreck and The Thorny Creek -Mountain, and contains 11000 acres and is within the bounde of the Thomas Wilson Survey. The Little Thorny Creek has the first small artificial Lake in the County this lake is reached by a good roadway from the site of the old Senica C.C.C. Casp , by crossing a spur of the Thorny Creek Mountain, this Lake contain about 7 acres and about 15 feet deep , This equipped with cabine rest rooms and rowe boats , and during the summer season is visited by many tourists. Hundreds of Deer are in the region of the Thorny Creek and The State Game Reserve The first settlers on the Thorny Creek found the bottoms to be covered

with the white Thorn Trees and thereby named it Thorny ... Creak " Dilleys Flour Will is situated on the Thorny Creek. (New out of Use)

KNAPPS CREEK: - KNAPPS Creek is the Greenbrier Rivers largest and most important tributary in Pecahomtas County. It has its source high up in the Allegheny Mountain near the State line , and near the top of the Allegheny Mountain five miles east of the Village of Frost. It flows in a south west direction across the Upper Devonian [Geologically Speaking) sandstones and shales to the Village Of Frost, where it is forced to swing to the south because of Mountain the Browns Mountain and the Michael uplift . From this point it follows the less resistant Middle Devonian shales, and passes through some of the best farm land to be found in Bocahontas County , to where it is joined by Laurel-Creek and its tributaries from an oposite direction near Minnehuha Springs, and from there it swings north-west to cut a deep gorge through thes e ranges to join the Greenbrier River at Harlinton . It has a total length of 26.8 miles as it meanders in its natural course, It has an air-line distance of 17.76 miles, and has a total fall of 1560 feet, and a rate of fall per mile of 58.2 feet; It has a drainage area of 109.96 square miles.

The Knapps Creek Valley is one of the most beautiful valleys to be found in the State of West Virginia. The average width of the bottom land of the Knapps Creek Valley is approximately three-fourth mile wide and is a farming section from its source high up in the Allegheny Mountain, to its conjunction with the Greenbrier River at Marlinton. Nearly all the bottom land is cleared and is in a state of cultivation from Marlinton to its source, farms and homes are located in all the branches that that find their way to the Knapps Creek-Valley; The soil of the Valley is very productive especially along in the bottoms and here the soil has been carried in, and by the intermixture the fields produce abundantly nearly all the crops that is common to Pocahentas County. The soil is suitable for the timber growth of the famous white pine trees, which has been produced abundantly all over the Knapps Creek and its tributaries. The Knappe Valley was heavily timbered when the early settless was been dead to clear the land and establish their bakes, which appears to be about the year of 1760.

Mout 1770 Moses Moore the progenitor of the largest relation ship of the Moore name in Pocahontas County, came to the Knapps Creek Valley, known at that time as Ewing, a Creek, and is so named in many of the old landpapers in giving the local description of the land grants,; This first settler on what is now called Knapps Creek was James Ewing, he must have made settlement on the Knapps Creek about the year of 1760; Traces of the original cabin remained for years in the meadow near the old orchard contigious to Washington - Moore, a present residence. The tract of land purchased from James Ewing for the consideration of two steel traps and two pounds of English Sterling, extended from from the land formerly owned by Andrew Harold to Dennis Devers gate by the road side below the Francis Dever homestead,

Besides other improvement Moses Hoore, built a Mill on Mill Run,
near Grady Moores home, and was the first old time water mill erected on
the waters of Knapps Creek, (Michael Daugherty built a mill farther down KnappsCreek about the same time.)

The first pieneer settlers of the Knapps Creek Valley as they appear in the records of Augusta and Bath Counties, are as follows James Ewing, Moses Moore, Timothy Mc Carty, Michab Daugherty, Michael Clark, John Sharp, John Bradshaw, Peter lightner, Joseph Carey, Abraham Deviase, James Dunlop, Eamuel Machum, Patrick Magrath, John McCollum, George Poage, William Rhea, Andrew Reid, Signatification, Todated Archibald Stewart, Erekiel Townsend, and others. The early development of Posahontas County was made while under first Augusta County, during the Revolutionary War, and then after the formation of Bath from Augusta in the year of 1791 and thereafter till 1821 when the formation of Posahontas County took place. When the Greenbrier Valley and the Enappe Greek Valley, and Posahontas County in general, became a place of interest to the people of Bath County, their only routs to the Little Levels, to Dummers, Greenbank, and the upper Greenbrier, then often refered to as the Upper Tract, was across the Allegheny Mountain, to the Enapps Greek Valley with was referred to as the North-Test Passage "

which was applied to the Knapps Creek gorge between Minnahaha Springs and the town of Huntersville , one of the many Indian trails that crossed the Allegheny Mountains from the Jackson River Velley crossed at Rimal out by Minnahaha-Springs, and down the Knappe Creep , passing under the Anticline , on the south side of the Creek and by the town of Huntersville, crossed Marlins Run at Marlins Bottom(now Marlinton) crossed the Greenbrier River near the Tannery, and on by the Indian Draft. In 1744 1756 The Indians raided the Ways home in Bath County , a few miles from Bath Alum . Joseph Mayes aged 13 years , his mother, an unknown white girl, and a Mrs Sloan, and her infatt Infantere taken pri -oners . and according to Historian Andrew Price during that raid they ki.lled twelve persons wounded two, and carried off thirty -five persons as prisoners; on the second days march they crossed the Jackson River near Warwicton , Back Creek Mountain, and camped near the mouth of Llittle back Creek, now Mountain Grove. The third day they crossed the Allegheny Mountain come down on the Knapps Creek-Valley marched down Knapps Creek to a point about half-way between Marlinton, and Huntersville, and there went into camp for the night; This camping site of the Indians , and their captives is supposed to be some where on the lower ed end of the lands formerly owned by the Late J.H. Buseard; The fourth morning the Indians were on the march bright and early , but they were closely pursued by the melitia of Augusta County , and a running fight occurred down near the mouth of Enapps Creek and Marlins Run , now at Marlinton , The Indians were closely pressed , were pursued some distance up Stony Creek and the Indian Draft but sould not be overtaken. It was in this raid that child was killed at Warline Run by the Indians and buried the same day.

It appears that all the Indian raids that occurred on the upper Jackson gives and vicinity, in former hath County and Augusta County, the trail passed over the lower Enapps Greek Valley, crossed the Greenbrier River near the site of the Taumery at Marlinton and out by the way of Stony Greek and the Indian Draft

tobe asstimet

Roscos W. Brown

Dec 3-1-1940

- Sec D)

The Greenbrier River and all its tributaries, have names that have
been assigned to them by the early pioneers of the County of Pocahohtas, which
was first settled while under the regime of Augusta, Greenbrier, Pendleton,
Harrison, and Bath Counties. Many of the names of the smaller streams were
given by eld hunters, and explorers, and later by the lumbermen that cut out
the Wirgin Forests of Pocahontac County. Some of the small branches have taken names
that are peculiar to their location, - such as North-Fork, South-Fork, East- Branch,
West- Branch, Big- Spring, Big- Run,. The Streams or Branches that are thus named
the name is self explanatory and does, nt mean any thing in particular, more
than the name is common to the particular Branch or Stream, that it flows into,
and geographically situate its self in relation to the stream it flows into.

In Pocshontas County there sight branches that bear the name of "Laurel"
Four Laurel Runs, two Laurel Creeks, one Laureley Branch, and one Little Laurel.

And there many different Branches of minor importance is dubid with the Name of " Laurel" that is not mentioned or shown in the Topographical Maps of the U.S. unde for Focahontas County.

These Franches are named from a small tree or shrub that that grow profusely on the Branches that are called Laurel. There are two species of the Laurel that infect those Branches so named.

The Rhodedendon which is sometimes called "Big Laurel" or Deer tongue Laurel. It is certainly one of the most beautiful of all our native species and has been appropriately selected as West Virginias State Flower.

Mountain laurel has rich evergreen foliage and beautiful pink and white flavors and nearly as attractive as the Rhodedendron .

The Mountain Laurel is poisonous to cattle and sheep, but the Rhododendron is nort poisonous.

Deer Creek, is the second largest tributary of the Greenbrier River in Pocahontae County , heads in several small branches on the west side of Franks Mountain and the main Allegheny, that have cut deep V- shaped valleys flowing westwardly, with its branches and tributaries cut a broad level valley in the vicinity of Greenbank and Arbovale. And is perhaps the largest flat land section in Pocahontas County; It continues in a south west direction, cutting a deep gorge, including a beautiful ox -bow one mile East of Sase where it joins the Greebbrier River; This beautiful "Ox-Bow" or "Loop-The Loop" as it is some times called, is a freak of nature, that attract many visitors, it is where Deer Creek in an entrenched meander of about two miles, flows in all directions , North, South, East, and West , and nearly meets its self meets its self by less than the tenth of a mile, the barrier is a cliff of rocks that rise in the center of the loop to about 350 feet, and forms a very beautiful ridge of evergreens Pines and Laurel, this neck of rugged land resembling a promontory, was called by the old hunters in the pioneer days . " Scanni whook" it was a good crossing place for the Deer. The old road way that went soon down Door brook, and the settlement on ha . the Ofeenbrier Miver and the Back Alleghenve Mountain went sup on ver this bar and was nemed by the early settlers " Bar Ford ". And the place still continues under the name of "Bar Ford"

Deer Creek has a total length of 17.4 miles with a drainage of an area of 68.03 square miles. Its tributaries are: North Fork, Rosin Rup, Sutton Run, Tackets Fork, Block Run, Hellebore Run, Griffin Run, Cooper Run, Mespital Run, Riley Run, Duncan Run, Trimble Run, Buffalo Run, and Saulsbery Rup, and many small runs and hellows of minor importance as: Bearpin Hollow Jakes hellow, Sheets Hellow, Talman Hollow, Rattle Snake Hollow, Ross Hollow, Trwin Hellow, Elliott Mollow, and Hamilton Hellow. Rumbaugh Hollow.

The name of Deer Greek: origionated with the first settlers of

pocahontas County, many different names have been bestowed upon the branch

""

tut Deer Greek is the name that has prevailed for a period of about 160 years

The first settlement on Deer Creek was made by John Warwick, and his three sons William Warwick, Andrew Warick, and John Warwick Jr, which was made about the year of 1765 some people fix the date at 1770.

The old origional homestead was on the North West side of Deer Creek above
the Steel Bridge and the Cass road, opposite the conjunction of Deer Creek,
and the North Fork, after the settlement was made by John Warwick and family
an attack from the Indians was apprehended and the settlers determined to build
a fort as a defense of the infant settlement, which was planned by Jacob Warwick
who was making a settlement at what is now Durmors, and erecting a fort at that
fort
place about the same time. The John Warwick on the Deer Creek, was circular in
form. and the reef was partly covered by sods and dirt to prevent fire from
the enemy. The white oak walls bristled with port holes and surrounded by a stokkade
fence, an almost impregnable defense. This Fort was used as home fore some of the
settlers who often lived for weeks inside its walls. For many years it remained a
femous fott on the frontier, having withstood several Indian attacks.

The Fort was situated in the forks of Deer Creek and the North Fork, on an elevation of ground that commanded a fine view of the surrounding country. The site of the old Fort is situated in the west end of a field now owned by F. H. Warwick turn told.

The description of the Fort was told by the venerable Peter Warwick who was in told.

By his Granifather William Warwick.

For a period of about 300or 40 years , during the early settlement the branch now known as Deer Creek was called : Warwicks Creek in honor of the Pioneer Warwick and was quoted in the land records as Warwicks Creek a Branch of Greenbrier River.

the pioneers were settling up the Deer Creek valley, or Warwicks Creek as it was were called, found the Deer to be senumerous that they considered a pest to the farmers, who had to farm on a small scale, only having small fields and patches planted, and the Deer would some times destroy a whole crop. There is a tradition that Jacob Rumbaugh who lived upon the land now owned by Monroe Peard, did, nt have feed enough to winter his cow, and fed her on Deer meat (It has since been conceded that a cow will eat dried venison)

And from the fact that the Deer were so numerous in the the country it was called Deer Creek And to the Indians it was called by names that have have ling been forgotten, The Indians called it Ta-rin-ka, Wak-pa-dam. meaning Deer-Creek. and hence the name Deer Creek.

As we study into the names given to Deer Creek proper above the confluence of the North Fork and Deer Creek, and that of the Rosin Run the branch that flows into the North Fork South of Greenbank, it appears that the names have been applied improperly; and crise-crossed. Some of the older folks claim that Rosin Run was called Deer Creek; and the North Fork its North Branch, and and Deer Grookpropor was called Back Creek or Muddy Creek, which seems to be very reasonable, and some of the old land land, records give their local description in this particular respect.

but however the names as they exist at the present time, have gone down in the bistory of all the land records, and are so fixed that it will be a matter of impossibulity to change the names bank to their original meaning.

near and North of the Durmore Mineral Springs; this small Branch gives rise in what is locally known as Charleys Ridge, in the Lime Stone Section of the Hill-Meighborhood East of Durmore, It has an entire length of 3.5 miles, with stotal fall of 625 feet with a rate of 178.5 feet per mile; and has a drainage basin area of 2.10 Equare Files; This Byanch known as the Gum Spring Branch has many small intermittent streams, Mwich are all situated in a Limestone Section and the land is all very productive, and some of the very best farms are situated in its water shed and its velley.

The Gun Branch received its name by the fact that that an old pioneer by the name of Gum lived for a timey at an ice cold Spring which is near the Gun-Spring school House, now discontinued by the Board of Education.

DUNDRE SPRING BRANCH: The Durmore Spring Branch Branch, the Spring of which has been recently called the Rooce Prichard. Spring, is located on the highway 0.6 mile South- East of Durmore is one of the largest artesian springs in Pocahontas County, comparing favorably with Minnehaha Springs in size.

This water emerges in two or more points in the Bossardville Limestone and contains principally the minerals of Calcium, Magnesium, and Sulphur.

very little use is being made of this excelent flow of water of medicinal properties, save during the summer months when a very small portion is bottled and shipped for drinking purposes.

This small Dummore Spring Branch in the length of 8 mile has a fall of about 16 feet. The flow of water is so strong that it has been developed and has run the Durmore Flower Mill about a hundre years;

This fine Spring and its facility for water power was the main instigation to bring about, the first settlement of the Dunnore neighborhood by Jacob Warwick and Robert Sitlington which was perhaps about the year of 1766.

Firs Hunter of Marlinton now ownes the head Spring of the Durmore Branch and Swinning Foolsthave been erected of Stone and Concrete, also cabine and Rest Poons have been built; A Concrete momment of Powhatan the father of Indian Frincess Pocshontas has been erected; a stone building has been erected in hear of the pieceer Jacob Serwick, who first owned the land.

MCCRES RUN: The Moore Run gives rise in the Hill neighborhood East of Durmore near Dave Sheets farm, and flows in a South West course, to unite with sitlington Creek, Near the Village of Durmore, it has a total length of 2.7 miles, with a total fall of 200 feet, with a rate of fall of 74.1 feet per mile, and has an area of drainage basins of 4.88 square miles

ror many years this Branch was locally known as Henches Run, and tas quoted in the Land Records as far back as 1839 as Henches Run and has been quoted as Henricks Run in the land records, There is a tradition current, that there was a man by that name of Hench" that lived on the head of the run, and that the run was named after him. However the name has been changed by the Geological Survey of Pocahontas to that of Moores hun. In honor of the late Isaac Moore, who figured largely in the development of the Durmore neighborhood; and for whom

The Durmore neighborhood is one of the oldest settlements of Pocahontar County, It was at first known as" Warwick " and when the Mathews' became the owners of all the realty of the Durmore section, it was then referred to, and called Mathewsville'; Isaac Moore and a citizen by the name of Dunkum, bought from Andrew G. Mathews his fine farm, and divided it, and out of their mass they jointly coined the word Dun more, and so named; the Post Office which had been previously named Mathewsville.

The first settlement of the Durmore community was made about the year of 1766, any way Andrew Sitlington wrote a letter to his Prother in Ireland bewing date of 1766. and was living on Sitlington Creek at that date (The letter is recorded in the Annuls of Math County)

The old Indian Fort, was built near where the water power mill, now owned by Cam Mc Laughlin, The Fort was erected shortly after that date perhaps about the year of 1770. The following Revolutionary war veterns affidavit

Forports the fact that it was built about that date, or before, the work he has sufference to in the affidavit is rebuilding the Fort.

The affidavit of WILLIAM KINNERLY OF Augusta County .

TakenJuly 22nd 1833 (For the purpose of drawing a pension)

Wolunteered in August 1774 to serve against the Indians; Went out under Captain Mathews, William Roberts being First Lieut- and George Gibson second. Marched to Warwick Fort, where they joined Captain George Moffit, whose men was building the Fort # xxxxx

This Affidavit purported the fact that they were building or repairing the Fort at Durmore In August 1774. It appears by the records that there was some kind of an Indian Fort there at Warwick before Capt George Moffit was building the as mentioned in William Kinnerlys affidavit.

its way in to the plateau scarp, which

It has a meandering length of 5.15 miles with a total fall of 1900 feet or at a rate of 368.9 feet per mile. Its Drainahe Basin area 6.74 square miles.

The Spruce Lumber Company constructed a Railroad up the Leatherbark Run from Cassaff at an Incline of over 1400 feet to Spruce, which was by the means of switch-backs; this was built in the year of 1902 & 1903.

This was for the purpose of hauling the timber from all the holdings of the Spruce Lumber Company , in the head waters of the Shavers Fork of Cheat, — Elk River to Case , to be manufactured into Lumber.

Lestherbark received its name from the shrub " Leather bark" or Leatherwood" which grew as abundantly on the branch near the Oreenbrier river; which is a small "Thymelasanesus" tree or shrub , with tough pliant stems, and small yellow flavors, - called also Moose wood, this shrub was used for Ox whips and Horse whips

DESVER RUN: - Deever Run , is a small branch heading high up in the East side of the Alleghemy Mouhtain , and flows with a rapid fall to the Greenbrier River, it has an entire length of 1.9 miles with a total fall of 890 feet , with a rate of 468 feet per mile, and has a drainage basin area of 1.62 square miles.

This branch received its name, from the fact that James and William Deaver settled near by, who were supposed to be among the very first settlers on the Back Allegheny Mountain.

CUP RUN: - Cup Run is a small branch heading high up in the East side of the Allegheny Mountain and flows into the Greenbrier River, a short distance East of The Deevers Run. It has an entier rength of 2.05 miles, with a total fall of 1090 feet, with a rate of 531.7 feet of fall per mile, and has a drainage area basin of .92 Square Nakes.

This Branch received its name due to the fact that where was found a large stationary stoneresembling the shape of a Cup in the branch and was thereby called CUP RUN.

Wahless RUN: - Wanless Run is an other small branch heading high up on the Easten side of the Back Allegheny Mountain, and flows with rapid fall to the Greenbrier Rigr near the Wanless Station. It has an entier length of 2.2 miles with a total fall of 1255 feet, and has a rate of 570.4 feet fall per mile, and has a drainage area basin of 2.80 Square feet per mile.

This branch was named in honor of the Pionser William Wanless, who settled on the Eack Allegheny Mountain along with the firs settlers of that vicinity.

TROUT RUN: - Trout Run gived rise high up in the Eastern side of the Back - Allegheny Mountain and flows with a rapid fall to the Greenbrier River below the site of the old Lumber Town of Nida.

It has an entire length of " 2.05 miles with a total fall of 1405 feet, at the rate of 685.3 feet per mile. and has a drainage area basin of 2.80 Square miles

The Trout Run was so named because its waters were full of the famous Brook Trout.

Geologically speaking on the East side of the Allegheny Mountain, and flows South -East with a rapid fall to the Greenbrier river at Hosterman.

It has a length of 2.7 miles, with a total fall of 1975 feet or a rate of 731.4 feet per mile. It has a drainage area basin of 3.44 Square miles.

Albegheny Run was so named from the Back Allegheny Mountain, from which it flows, which has derived from the Indian Language with an unascertained meaning. Some Educators claim that it means in the Indian Language "The big sign" "The big track" "The Big mountain " or the "Big Run".

moods RUN:- Woods Run is a small branch, that flows in to the Greenbrier River near Stony Bottom (Formerly Called Drift Wood) It has an entire length of 2.8 miles, with a total fall of 1450 feet, with a rate of fall per mile of 517.8 feet, and has a drainage area basin of 2.21 Square miles.

It has been said that this little branch received its name from James 20035 Warwick and is quoted in the land records, early as 1830.

LAUREL RUN: - Laurel Run including Sweet Lick Run gives rise in the westerns side of the Thomas Mountain and flows in a western course to the Greenbrier river at Clover Lick.

It has an entire length of 4.4 miles with a fall of 830 feet, with a rate of 189.7 feet per mile, and has a Drainage area Basin of 3.58 square miles

The Laurel Run road way has been one of the most importent thoroughfares in Pocahontas County; At a very early date about the year of 1782 Jacob Warwick lived at Durmore, and had holdings at Clover Lick, and the road way or thoroughfare from his home at Durmore (Then refered to as Warwick) was down the Laurel Run to CloverLick. The Road at first was built across the Thomas Mountain, north of Laurel Run, when about the year of 1800, Mrs Jacob Warwick had the first road cut out up Laurel Run, in order to bring the lumber for their new house from the vicinity of Greenbank. Ever since that date the County and State have been working on the Laurel Run County Road, and are still working on it, and at the present time the W-P-A is giving it a rock capped surface.

There are many authentic historical events, connected with the Laurelhay
Run and Clover Lick. While Jacob Werwick was making at Clover Lick, with several
rain
hands, acame up and dempened their guns, which was always kept near by in
the Indian times; In the after noon the men fired their guns off, so as to load
them with fresh charges. Some person hearing the guns in quick succession
reported that the Indians were fighting the men at Clover Lick.

Mrs Warwick at Dumore, at once mounted a large black stallion, put a colored
boy on behind and went at full speed, by way of the Laurel Run which was then
only a bridle path, fowam/thaugreenbrier River to see what was going on at
Clover Lick. This colored boy was called "Ben" who died at Clover Lick,
and is remembered by many of the older citizens.

upon another occasion, when the Shawness Indians were returning from one of their raids to the east, forty or fifty of their warriors were sent by Clover Lick, with the intention, it is believed, to pillage and burn every thing at Clover Lick. A scout from near Millboro Va, was sent in haste to warn (Colled Warwick) acob Warwick of the movements of the Indians, The Fo rt at Durmore was put in readiness; and Jacob Warwick who was then at Clover Lick; with about twenty others, waited for the Indiand in ambien on the crest of the mountain over looking the Laurel Run; They all fired on the Indians which was very effectively done, nearly every man killed or wounded an Indian.

The Indians on their surprise heatily fled, and was pursued as far as

Elk Fater in Randolph County. Upon learning of the result, Mrs Warwick

at once followed her husband and his companions, attended by servants

carrying provisions for them. Sho mot them at the Big Spring on their return

and the weary hungry party were greatly refreshed by her thoutful preparation.

The bourel Run was so named by the immense quantity of Laurel that grew in the lower part of the Run near to the Greembrier River .

GLADE RUN: -

The Glade Run is a small Branch that flows in a South-West direction to unite with Clover Lick Creek a few feet from its mouth . but the Geologist claim that at an earlier date it was a branch of the Greenbrier River , about 0.8 mile North-West of Clover Lick , when the River flowed across the narrow now abandomic channel that surrounds the knoll one mile West Of Cloverlick .

Glade Run has an entire length of 3.6 miles with a total fall of 1175 feet with a rate of 326.3 feet fall per mile, with a drainage area basin of 2.50 square miles. It received its name by the local land owners that it flowed through early as 1849 which appears in the land records of that date.

ROSCOE W. BROWN.

a pril 5th 1941.

(Part 1)

Sec D)

Clower LICK CREEK: Clover Lick Creek has its source in two forks, heading between Gay Knob, and Clover Lick Mountain, the two uniting to flow North for about four miles where it swings to the East forming a semicircle around the northern end of Clover Link Mountain, then flows in a southeastern course and unites with Glade Run about 0.8 miles north west of CloverLick which Geologist' claim was an 'tributary of the Greenbrier River, when the River flowed across the now abandoned channel that surrounds the knoll one rile west of Clover Lick.

Closer Lick Creek is one of the most important branches of the which the Greenbrier River much of the lands through it flows is of the Lime Stone formation, and is noted for its fine quelity of Elue Grass that it produces so shundantly, which makes it a real section for stock raising of cattle sheep and horses.

From the very earliest settlement of the Clover Creck Valley it has been highly noted for its productiveness, in the way of grace, and fruit and vegitables as potatoes, No place in Pocahontas County is more productive than the Clover Creek Valley; which was a great incentive to the early pioneers of Pocahontas County.

This Greek has a total length of 9.8 miles with an air line length of 5.3 miles of a ratio of 1.84. It has a total fall of 1580 feet, or at the rate of 162.2 feet per mile. and has a drainings area basin of 18.17 squaref

At Clower idek a "r Coyner has constructed a dam across Clover Created and developed a fater power, installed a small turbing which has sperated as electric generator, and run light machanery, with the same unter power devices

It appears that the first settlement on Clover Lick Creek , was made some -cess time prior 1774 , the region was first occupied by the Lewises, Jacob Tarwick first rented the lands at Cloyer Lick Creek from the Lewiser' then later decided to leave Pocahontas County (Which was then Bath County) and settle in Kentuckey, having already secured possessions in Kentuckey; he started on the trip, when some of his party in advance were all slain by the Indians near Sewell Mountain; Jacob Warwick then with his family returned back home at Durmore; Mrs Warwick thereupon became so unwilling to emigrate from her Pocahontae home, that her husband decided to exchange his Kentuckey possessions with Alexander Dunlap , for a portion of the Clover Lick lands. The Dunlap Patent called for 400 Acres of land; the actual survey made 600 Acres , there was a suit between Lewissand Dunlap about this possession; when matters as to these lands were settled and became satisfactorily arranged, Jacob Tarwick moved to Clover Lick Creek , and srected a rowe of Cabins and lived in them intermitently , his home being at Durmore (Then refered to and known as Warwick) and had a home stead and land holdings on Jackson River.

Durmore, or Jackson' River, for a short time, and left his Cabins at Clover Lick in charge of two colored men, a man one by the name off "Sam" and Greenbrin-Fen, and upon this occasion, he went to Randolph County, by way of the old indian trail leading up Clover Lick Creek, by the Big Spring Branch, and on through the Mingo Flats section.

It was night when he returned, and as he was nearing home on Clover Lick Creek, his horse scared at something in the road, which he Ayoned recognized as fresh, of reasting ears, the presence of Indians was at once suspected and upon approaching the house cautiously it was found that the row of cabins were all burned, and the presines ransacked.

In their glee , the Indians had caught the chickens picked all their feathers off and let them go.

Sam the colored man made his escape to the woods, but "Greenbrier Pen" then about 10 or 12 years old hid in a hemp patch so near the cabin that when it burned he could hardly keep still, his buckskin breeches were made so hot prop his hiding place in the Hemp patch, he saw the Indians pick the chickens leaving their tails, and hap knots, and laugh at their grotesque appearance.

He saw them run the wagon in to the fire after the Cabin near the spring had become a smouldering heap of coals. This was the first wagon ever to cross the Alleghianies in to what is now Pocahontas County. It was brought from Fountain Grove, up Little Pack Creek, about three miles above where the Huntersville road first crosses the stream going East; then across Knapps Spur slong by Marpers Mill, then straight across to Thorney Greek through the Lightner place past Bethel Church to the Saunders place on Thorney Creek; thence up the ridge to the top, and then down to the Knapp place on the Greenbrier River then to Clover Lick.

(It must be understood that this wagon was taken across the Allegheny was

Mountain and to Clover Lick Creek, before there was any roads that would permit
a road wagon to pass over, it passed through unimproved lands, and perhaps was
taken up the Greenbrier River bed from the Knapp place above mentioned)

Fort was erected in defense against the Indians, on Clover Creek, and was refered to as the "Clover lick Fort" and some times called " Warwicks Fort " After living at the Clover lick wheek for some time they, sold the 525 Acres at Durmore to Sampson Mathews bearing date of Dec 14 th 1802 tes beed Fook to 4 at Page 498 of Bath County County va. Freand Mr Warwick thought best to move with their Children to Jackson a River estate, they that moved from Clover Creek to math and remained there till their bon Andrew mas married, then they came back to Clover Lick Creek, where they found their

time were deemed unfit for occupancy, and arrangements were made to build a spacious mansion; Patrick Bruffey was employed to hew the timbers and to does the Lumber. This spacious Mancion was so arranged that it was used for Church service for many years on Clover creek.

This Historic Dansion was finly removed to give place for the residence of Dr which was burned in 1884.

In the early pioneer days, the main route for Emigrants from Maryland

Pensylvania and other pioints North and North East passed by Clover Etck Creek

to Mentuckey and Ohio, As many as forty and fifty would be entertained over night

at the home of Jacob sarwick on Clover Lick Creek; This made Clover Lick one of

the most public and widely known places in the whole country.

The name of Clover bick Creek first appears in the Records early as 1774 and is mentioned in the following affidavits, of the Revolutionary War Veterns a pension in order to secure for their services in the Revolutionary war.

Robert Sitlington made affidawit Sept 3rd 1832:-

That he was drafted in 1777 to serve two Months at Warwick and Clover Lick
Forte against the Indians; under Captain Samuel Vance and Lieut John Cartmill.

Immes Hooddell: - (of Procehontas County) Sept 3rd 1832:-

Wade affidevit that he was drafted from Augusta County 1774. being stationed at Clover Lick 6 weeks under wearge Moffit.

million Kennerly Of Augusta County made affidavit July 22nd 1833.

Volanteered 1774 to serve against the Indians . went out under Capt- George Fathews; Filliam Roberts being first Lieut; and George Gibson being second. Farched to Warwicks Fort where they joined Captain George Moffets Company building the Fort.

The land Frant issued to Jacob Marwick under the regime of Math County for 515 acres learing date of 1797 gives the Local Mesoription as being in Clause Lick Greek.

There is a tradition, that there was found many different Deer Licks and plk Licks, up on this branch by the early pioneers of Focahontas County and one of the Licks found, on the branch North West of the Town of Clover Lick with clover growing growing very profusely around it, which appeared to be the Lick used mostly by by the Deer and Elk.; and it was spoken of as the "clover Lick" Then the name emerged but the name of Clover Lick Creek; and the name has always been attache to every thing connected with the section of Clover Creek and Vicinity.

No personever knew how the Clover got to this section of the country so early ,when all American cultivated forms come direct from Europe, including the Med, Cramson, White, sleike Swedish Clovers.

Clover was used for food by some tribes of the Indians in the early spring; the leaves of which was eaten as a salid.

The Clover blossom is an excellent Honey Plant and no place can produce better honey than in the Clover Lick Vicinity.

" To be in Clover " is a synonym of abundance .

The Four-leaved Clover is thought to be a portent of good fortune.

The Red Clover is the State Flower of the State of Vermont.

years. His son, Solomon Conrad, who was a veteran of the war of 1812, after going through the war and being honorably discharged took charge of the home place and rebuilt the mill, which was made to grind buckwheat and wheat. About 1840, he built and operated an up and down saw mill, until the close of the Civil War. This mill, known as the Conrad Mill, was considered first class, making the very best corn meal, buckwheat and wheat flour. In connection with the saw mill he had a dry kiln, and always had some of the very best white pine lumber to sell. In that day and time no log was sawed into lumber unless it was the very best.

The old mill site and the Solomon Conrad homestead has been the home of O. L. Orndorff, a grandson, who, in 1893, and to re-roof and weatherboard the old home, and Warwick Hudson and Tewton Ervin to rebuild the chimneys. This is the oldest house in the Greenbank community, having stood 115 years or more, is on the colonial style, with its massive chimneys, and old time fire places and spacious mantels in a fine state of preservation and has the appearance of standing another century.

In the year 1822, Batrick Bruffey purchased from Jacob Gillispie and James Tallman, 134 acres of land, which was part of the Thomas Jarvis Grant of 400 acres. He built a grist will and saw mill and carved a mill race out of the hill side more than a quarter of a mile. This same mill race has been in constant use for a period of 112 years and is still running. In sommeotion with the saw mill, he established a wagon shop,

blacksmith shop, and supplied the neighborhood with wagons.
The late William Sutton of the hill neighborhood, learned the wagon makers trade under Patrick Bruffey and carried on the work long after the Civil War. Patrick Bruffey was Magistrate in the community for several years and became Sheriff of Pocahontas County later.

The pioneer, Daniel Kerr, who, soon after the Revolutionary War, located on Deer Creek, now below the town of Boyer, established a grist mill, saw mill, blacksmith shop and managed a store and his place became one of industry for that part of the community. A lathe was installed at this place and was operated by Frederick Phillips, who was a wheelright, and made spinning wheels, looms, reels, spools, spool frames, and chairs. The site of this old mill may be seen on the north side of the creek near the east end of the nevener farm.

The pioneer Luday Taylor, who was a veteran of the war of 1812, purchased land from Solomon Townsend and others in 1819, and settled on Galford's Creek. He erected a grist will and a saw mill. This mill was kept in running condition until about 1880, and had its niche in the early advancement and development of that part of Greenbank community. The old budsy Taylor homestead is now owned by Arch Galford.

Thus is noted some of the early developments of Greenbank District, Pocahontas County, which District now leads the County in industrial development.

Pella & geogram

on the Little Mountain side, formerly on the lands of the pioneer Warwicks, now comed by Willie Sheets. At the mouth of the hollow a score or more of Furnaces or enclosed fire places were built, supposed to have been build by the Indiane the reason for which is not known; The pioneer John Warwick that settled nearby—about 1770—never knew the purpose of the furnaces, they were about three feet wide, and six feet long, and about three feet high, they are now all fallen and look like piles of rocks. The pioneers learned from the Indians that some profound secret appeared to enshroud the the Furnace Hollow and the Mine Bank; For long generations the Indians had followed the same paths beating them down! deep in the forest earth, and the pioneers that made the settlement near the forks of the Deer Creek, at the Furnace Hollow, and the Mine Bank, recited the fact that the Indian trails appeared to diverge in every direction, from the vicinity of the forks of Deer Creek. It appears that this section of the country was a special meeting place of the Indians in prehistoric times.

Then the Indians saw the pioneers building the Warwick Fort, at the forks of Deer Creek, which he between the Mine Bank, and the Furnace Hollow, they were examperated, and many skirmishes occurred afterwards, when they saw that they were going to like their hunting, camping, and fishing grounds.

We have it by a direct line of tradition that a band of about fourty indiens returned to their old comping ground, near the Mine bank, on a friendly mission which may have occurred about the year of 1800. Any way it did not occur till after that anthony Mayne had brought about a treaty with the Indians in 1795.

These Indians were old warriors, with their wives, and some Indian Boys; Their samping place wass on the lands Andrew Warwick, in his sugar crehard, which is new sweed by Grais Slaven, and may have been near the location of the Fraternal Park.

one line of tradition of the return of the Indians, to the vicinity of the Furnace Hollow, and the Mine Bank is, that Elizabeth Warwick, who became the wife of John Slaven, on April 3rd 1783, and was living on the Breenbrier River near the Town of Frank; in company with her daughter Annie Slaven, decided to pend a few days with her brother, Andrew Warwick. upon their arrival their horses became terribly frightened when they rode into the camp of the Indians, but their fear was soon assuaged, when they saw some white folks standing near by, and learned that the findians were not on the war path.

The Indians were lounging around on the ground, watching the boys shoot birds of from the tops of sugar trees, with bow and arrows. The Indiand said, they were passing through the country, visiting the graves of their fore fathers, for the last time; at least they left that impression on the minds of the early settlers.

Hany prospectors, have visited the Mine Bank and " The Furnace Hollow", with maps, or plats, showing the delineation of the vicinity, of the junction of the North Fork Creek, and the Deer Creek, the Mine Bank, and the Furnace Hollow.

The Maps appeared to divulge the fact, that upon finding a certain keystone, or rock, therefrom by a certain bearing given, would leaf the way to some hidden treasure, mineral, or some natural compound of metal, or other treasure.

But however, the enigma that enshrouds the Mine Bank and the Furnace Hollow, is left for the writer of romance. Within the past twenty five years , the Mine Bank has cought on fire , twice; and has burned for a year at a time. The Mine Bank is first mentioned in the land records , in giving the local description of the Thomas Cartaill Patent, bearing date of June 1780. and is called for near the Wine Bank, (and is near where the Bank catches on fire.)

The Furnace Hollow received its name from early pioneer Warwicks who so send it from Stone Mason Furnaces that were found, at the mouth of the Hollow

The following letter was written by Mr. J.C. Harper of Knapps Creek and printed in the Pocahontas Times of December 19th 1940.

MKNAPPS CREEK AGAIN.

pear Mr, Price: (Editor of the Pocahontus Times)

I was interested in Wilms Beard Harper, s inquiry in your issue of November 6 28th as to who Knapps Creek was named for. I also noted with interest your answer in the same issue.

I read in the last issue of the Times, date date of Dec 12th, an article of Mr, hwing, am of the opinion like Mr Ewing that there is and probably always will be aquestion as to the man who should be honored with the name. However I should not be at home now, if I should wake up some morning and find I was living on Ewing Creek. Being of the fourth generation of the Karpers who have lived here in the heart of the valley, I beg to pass on the following information:

When a mere lad , fifty or sixty years ago, I well remember of hearing my grand father say, that Knapps Creek was named in honor of a man by the name of Knapp who lived on the bank near where the public road now is and opposite the present home of Ward Cleek. Also when a boy I enjoyed sitting by the open wood fire, and listen to my mother tell us of the past history of our local sommunity, many of the things she stated were stored in my mind. This was in the days when children were anxious to listen to older folks and were taught that a still tongue made a wise head. My great grandmother died in 1870 at a ripe old age. The first few yers of my mothers married life were spent with her. I have heard my mother make statements I/Math/My/Mother in regard to this Mr Knapp, same as I heard grandfather and she would say grandmother told me so. And from this history which is not written I am convinced of the location of where this man lived. And it was never mentioned to me but what the name was spelled Knapp. It may have been Caleb Knapp.

Now as to Napthalem Gregory, in my mind he can have the honor of the old Spur road, which crossed the mountain, near where H.I. Shinaberry now lives. This was called Nap, a Spur Road and was very much used prior to buggy days. Some wagons and traveled this road in the early days.

The following letter was written by Mr. J.C. Harper of Knapps Creek and printed in the Poonhontas Times of December 19th 1940.

KNAPPS CREEK AGAIN.

(Editor of the Pocahontas Times) Dear Mr. Price:

I was interested in Wilma Beard Harper, s inquiry in your issue of November 6 28th as to who Knapps Creek was named for. I also noted with interest your answer in the same issue.

I read in the last issue of the Times, date date of Dec 12th, an article of Mr, wing, am of the opinion like Mr Ewing that there is and probably always Wir be aquestion as to the man who should be honored with the name. However I should not be at home now, if I should wake up some morning and find I was living on Ewing Creek. Being of the fourth generation of the Harpers who have lived here in the heart of the valley , I beg to pass on the following information :

when a mere lad , fifty or sixty years ago, I well remember of hearing my grand father say, that Knapps Creek was named in honor of a man by the name of Knapp who lived on the bank near where the public road now is and opposite the present home of Ward Cleek. Also when a boy I enjoyed sitting by the open wood fire, and listen to my mother tell us of the past history of our local community, many of the things she stated were stored in my mind . This was in the days when children were anxious to listen to older folks and were taught that a still tongue made a wime head. My great grandmother died in 1870 at a ripe old age. The first few yers of my mothers married life were spent with her . I have heard my mother make statements I Matt dail did did in regard to this Mr Knapp, same as I heard grandfather and she would say grandmother told me so . And from this history which is not written I am convinced of the location of where this man lived . And it was never mentioned to me but what the name was spelled Knapp. It may have been Caleb Knapp.

Now as to Napthelem Gregory , in my mind he can have the honor of the old Spur road, which prosped the mountain , near where H.I. Shinaberry now lives. This was called hap, a Spur Road and was very much used prior to buggy days. Some wagone and traveled this read in the early days .

To verify the name, I have in my possession a grant of land from the Commonwealth and Virginia to my great grand father, Henry Harper, dated 1825, signed by John Tyler the courses of land trees are called for on this road mentioned as map, a Spur Road. This road leaves Little Back Creek near the old Chestnut home, following a long ridge to the top of the Alleghent Mountain, then following the top for some distance around the head waters of Laurel Run Creek, thence around the East end of the Little Mountain and down along the ridge to the Knappe Creek valley near the site of Harpers Mill. It is still evident that a long time ago topsiderable digging was done on this road at several places.

J.C.Harper.

Huntersville, West Va.

CHAMING CREEK: - Cummins Greek is a branch of Knapps Greek that gives rise near the top of the Brushy Mountain it flows practically due North for a distance of 6 miles to join Knapps Greek near Huntersville

It has a total fall of 1000 feet, with a rate of fall per mile of 166.6 feet, and has a drainage area of 11 square miles.

Cummins Creek began settlement about the time of the formation of Pocahontas and was so named from a pioneer by the name of Cummins.

LAUREL CREEK: Laurek Creek with its numerous branches is Knapps Creek largest tributary from a stand point of volum. Laurel Creek has its source high up on Allegheny Mountain only 3.6 miles (air line distance) from its mouth but flows in a southerly direction to Rimel where it is joined by Cochran Creek, with its numerous tributaries from the south, Thence it flows Forth west, cutting a gorge acress the the north end of Fiddle Mountain and is joined by Doutharty Creek also from the south, one mile south of Minnehaha Springs, where it enters Knapps Creek

The principal branches of the Laurel Creek are Doutharty Creek with an entire length of 6.3 miles with a total fell of 760 feet, with a rate of fall per mile of 170.6 feet, and has a drainage are basinof 11.65 square miles. Coffriel/ Cochran cresk with an entire length of 4.9 miles with af total fall of 950 feet, and a rate of fall per mile of 193.8 feet it fife/ has a drainage basinof 9.72 square miles other minor branches are Hiders Run, 1.7 miles long. Big Sandy Run, 1.9 mileslong Two lick Run, 1.4 miles long. Lost Bottom Run 1.7 miles long, Widemouth Run, 2.5 miles long, Laurel Run 1.7 miles long, Widemouth Run, 2.5 miles long, Laurel Run 1.7 miles long.

The main branches of Laurel Creek were so nume as follows; Douthart Greek was smed from Michael Daugherty, on a of the early pioneer nettlers of the Enappe Greek Valley his home was on the lands now owned by Ward Cleek; He settled there about the year of 1770.

The Ceshran Creek was so named in honor of the pioneer family of Cochrane was settled as the County while under the regime of Bath County Virginia, Laure) Greek has a total drainings area of 30,68 square utles.

NATURAL SETTING Pocahontas County.

Chapter Three.

Part (1) Sec (D)*

Roscov M. Brown. June 28-1941

BROWNS CREEK; Browns Creek has its source in several and the small branches that give rise in the Hill Country North West of the Knapps Creek, on the Browns-Mountain locally known as the "Horse Ridge" a part of the Browns Mountain.

This stream flows South-West and drains all the section between the Thorny Creek, and the Knapps Creek; It has an entire length of 6 miles with a taotal fall. of 525 feet, with a rate of fall per mile of 87.5 feet. and has a drainage area basin of 10. square miles

Its principal source is in avery large spring locally known as the

Peter Mc Carty Spring which is located on a branch of the said Browns Creek

0.7 sile north-west of Mt Tabor School, is largely a calcium and magnesium carboanate

water issuing near the Helderberg-Bossardville Limestone contact, the elevation

of the spring being approximately 2500 feet. A very large and constant flow of

sparkling clear water pours out the year round and appears to have but very slight

if any change of temperature throught the year.

The Browns Creek jains the Knapps Creek near Huntersville, which was the former County Seat of Pocahontas County, and near the junction of Cummins Creek with the conjunction of these branches and Knapps Creek, made an ideal location for the County Seat of Pocahontas County, with the road way down Browns Creek, down and up Knapps Creek, and down Cummins Creek.

Browns Creek, and Browns Mountain, received its name from a John Brown from near Parnassus Augusta County Virginia, who moved to Montgomery County, was a Captain in the Revolutionary War, who owned much of the lands by freeeption in the western part of Augusta County, and a part of what is now Pocahentas County

This right of preemption was the first right or privalige, to secure lands which right was granted by the Commonwealth of the State of Virginia, for marvices in the Revolutionary War.

ARTIFICIAL BODIES OF WATER: In Pocahontas County)

At the present time there are only two bodies of Artificial Water in Pocahontas, the Senica Lake which is in the bounds of the State Senica Forest on the waters of the Little Thorny Creek. This Artificial Lake was constructed by the C.C.C. Camp which was located in the Senica Forest, about the year of 1934. This small lake covers about seven acres of ground is about 15 feet deep six is provided with small boats it is a great swimming resort four cabins are built for visitors to use. This is a real beautiful little artificial lake and many tourist visit this place every year. It is situated in Game refuge of the Senaca Park; many peer, and wild Turkies, and Grouse, may be seen along the road going to the Lake. This lake is reached by a hard gravelled surfaced road with an easy grade and graceful curves, crossing a spur of the Thomas Mountain to the Little Thorny Creek

At the Seneca artificial Lake constructed by the Civilian Conservation Copps a recreational area has been developed into one of the most appealing outdoors vacation spots in the State. The high elevation adds to the comfott of a summer visit. Six cabins at the lake provide adequate lodgings. Boating, and swimming, and fishing are possible in the Lake, and a special playground for children has been constructed near the cabin area. Those who prefer water sports on the River can can obtain cottages on the banks of the Greenbrier, at the western edge of the forest, seneca is reachedd by a secondary road leading from Huntersville as State Route No 28

Senera State Forest contains 11050 acres is situated in the heart of Facahestas County's white pine area, and has a long history as a state forest and game refuge. As a result, the population of deer in this area today probably is the greatest in the State, further large numbers of equirrels ,grouse, and other game are to be found ,despite controlled shooting during the last two hunting assumes.

In accordance with Seneca, s functions as a timber farm, experiment of Chestnut plantings to develope a blight-resistant species, are of more than usual interest. This plantings to develope a blight-resistant species, are of more than usual interest. This plantings to develope a blight-resistant species, are of more than usual interest. This plantings to develope a blight-resistant species, are of more than usual interest.

The name of the Seneca State Forest wes given it by the State Game

Commission at the request of Hon - Andrew Price, in honor of the famous Seneca

Indians which was one of the tribe of the Irequois Indians formerly of the

western New York; the most numerous nad warlike of the Five Nations. They still

mumber over three thousand, the greater portion being in New York, and small bands

being in Ontario and Oklahoma.

The Seneca Indians; from whom the Seneca Forest was so named, formed a had war path after a treaty at Albany in the year of 1722, which was confirmed the act of the House of Burgesses of Virginia, making the Allegheny Mountain the division line between the lands allotted to the Indiand, and the lands that could be settled by the white people, a lime that was observed with more or less fidelity until about the time of the Revolution.

A well- traveled road was established by the Seneca Tribe the most powerful
of the Five Mations over which they traveled from the waters of the St, Lawrence
to the morthern part of Georgia, this Seneca trail passes through Pocahontas
County, and they were at all times informed of the acts of the pioneer settlers,
in breaking the agreement to remain on the eastern side of the Allegheny Mountain.

The old Seneca War Path is still visable in many places, it is plain
to be seen on the ridge north west of Marlinton; the path way is worn down deep
in the earth, and large trees are growing up in the center of the old Seneca
Indian trail.

METURAL SETTIME CHAPTER THREE (Pocchontas County)

Jan 25th 1941.

(Part 1)

BRUSH RUN - The Brush Run is a small branch, flowing in a westward course entering the Greenbrier River at Boyer Station on the Greenbrier River and has total length of 6.7 miles with a fall of 770 feet, with a fall 114.9 feet per mile, and has a drainage area 7.40 square miles, as shown by the Geological Survey of West Virginia.

Branch was
This, the natural outlet and route, for the greater part of the timber
industry in Pocahoutas County, situated on the waters of North Fork and Deer Creek-

The M.P. Bock Lumber Company that first began to operate in this section, in the year of 1901, erected a Band Saw Mill at the mouth of Brush Run, on the Greenbrier River and built the first Log Railroad up the Brush Run, and crossed the divide or Little Mountain, on the waters of Deer Creek; And all the many different Lumber Companion, (except the Range Lumber Company, and A.V.Miller Company) that operated the timber, on the waters of Deer Creek and North Fork, shipped their timber and lumber, down the Brush Run, to connect with the C.t. O. Rail Road at Nottingham, The Railroad on the Brush Run was in use, from 1901, to 1926, a period of 25 years, which was the period of time, taking out the virgin forest of Deer-Greek, and the North Fork Creek.

The Brush Run did not receive its name from the fact that there were plenty brush to be found on the Run, as many folks believe;

In the year of 7' 1795; Charles Gallagher made a survey of 32000 Acres of land which covered nearly all the waters of Brush Run; In the course of a few years, the large survey was acquired by a man by the name of " BRUSH " and the survey thereafter, was known as the Brush Survey, and the Run that was almost entirely in the bounds of the Brush Survey, was named The " BRUSH RUN".

SITLINGTON: GREEK: Sitlington Creek is one of the most impostant atreams
to the Greenbrier River in Pocahontas County, and has its source in Galfords Creek
high up in the Alleghany mountain; It flows in a general south-west direction
to Michael Mountain, where it is joined by Shock Run; (formerly called Buzzard Creek
the two uniting to cut a wide pass through the range at Durmore, and is joined
again by Thomas Creek 12 miles east of Sitlington, where Sitlington Creek
empties into Greenbrier River.

Other tributaries are Moore Run, (formerly called Henches Run) Gum Branch, Jakes Run, Stony Run, and Left Prong (of Galfords Creek) Sitlibgton Creek, has a total length of 14.5 miles with a fall of 1980 feet, and a rate of fall of 136.5 feet per mile; and has a drainage area of 51.06 square miles.

Sitlington Efeck, is the third largest stream in Pocahontae County that flows into the Greenbrier River. This stream was so named by the fact that Robert Sitlington, was the first permanent settler on the Branch, and the eastern part of Pocahontae County. His home was in the site of the town of Dummore.

A brief history of the name sake of Sitlington Creek, as follows:

The father of Jacob Warwick came to Augusta County, from Williamsburg Va, during Collonial times between 1740 and 1750. He was a lieutenant, in the service of the Eritish Crown, and was employed in surveying lands in Augusta County, and what is now Posshontas County; this Lieutenant Warwick located and occupied the property now embracing the village of Dunnore, situated on the Sitlington Creek and secured this property for his own use. He married Elizabeth Dunlap, near Widdlebrook, and he was one of the English gentry, whose families settled in Wirginia, in consequence of political reverses in England. After this Lieutenant Warwick concluded to visit England, which he did, but never returned, and being heard of no more he was given up for dead; in the meanwhile Mrs Warwick settled on the property, on Mitlington Creek, where the town of Dunmore its now situated, and had it secured by Beed, to her son Jacob Warwick, and then afterward marriage.

goen as Jacob Warwick came to manhood, Robert Sitlington moved to his own property near old Millboro. Jacob Jacob Warwick who now owned the Dummore property, always cherished the highest filial regard, for Robert Sitlington his step father; and for whose honor the branch was named. The Railroad station at the mouth of Sitlington Creek, was so named in honor of Robert Sitlington, the pioneer and Revolutionary War Veteran.

Robert Sitlington, s Affidavit as a Revolutionary War Vetern is as follows:
County
ROBERT SITLINGTON: BATH Sept 26th 1832. (Date of Affidavit)

Born -1749. In 1776, went out went out as substitute two months for Nathan Crawford, serving as ranger and Spy at Wafwicks Fort under captain John Lewis and Captain Samuel Vance. Drafted 1777 to serve against the Indians at Marwick, and Cloverlick'Forts, under Captain Samuel Vance, and Lieutenant-John Cartaill. Served four or six weeks against the British 1778-1779, under Captain John McCoy. Discharged at Richmond. Drafted for six weeks in 1781 and marched under Captain David Gwin to Guilford; was in the battle.
